COLLEGE

Module Code & Module Title

Level 5 – Network Operating Systems

Assessment Type

Logbook 4

Semester

2025/26 Spring/Autumn

Student Name: Manoj Katuwal

London Met ID: 24045922

College ID: np05cp4a240306

Assignment Due Date: Tuesday, November 18, 2025

Assignment Submission Date: Tuesday, November 18, 2025

Submitted To: Santosh Parajuli

Words count (Were Required) :949

I confirm that I understand my coursework needs to be submitted online via Google Classroom under the relevant module page before the deadline in order for my assignment to be accepted and marked. I am fully aware that late submissions will be treated as non-submission and a mark of zero will be awarded.

1 Install roles and fetures in windows server 2022 that helps to host a static website.

1.1 Aim

The man aim is to install roles and configure the windows server 2022 that helps to host a static website.

1.2 Objective

- Learn about the role of Internet Information Services (IIS) for hosting a web content in windows server.
- Installing the Web Server (IIS) role.
- Deploy a web page.
- Verify the website is hosting or not over a network.

1.3 Required tools and concepts

Tools:

- Windows Server 2022 Standard edition installed on virtual machine via VirtualBox.
- Network Connectivity.
- Web Browser.
- CSS template whom you want to host.
- A text editor

Concepts:

- Server roles and Features.
- Internet Information Services (IIS).
- Static Website.
- .NET framework.

1.4 Steps Required for lab

Step-1: Open Windows Server 2022 and open Server manager dashboard and click Add roles and features link will open a new window.

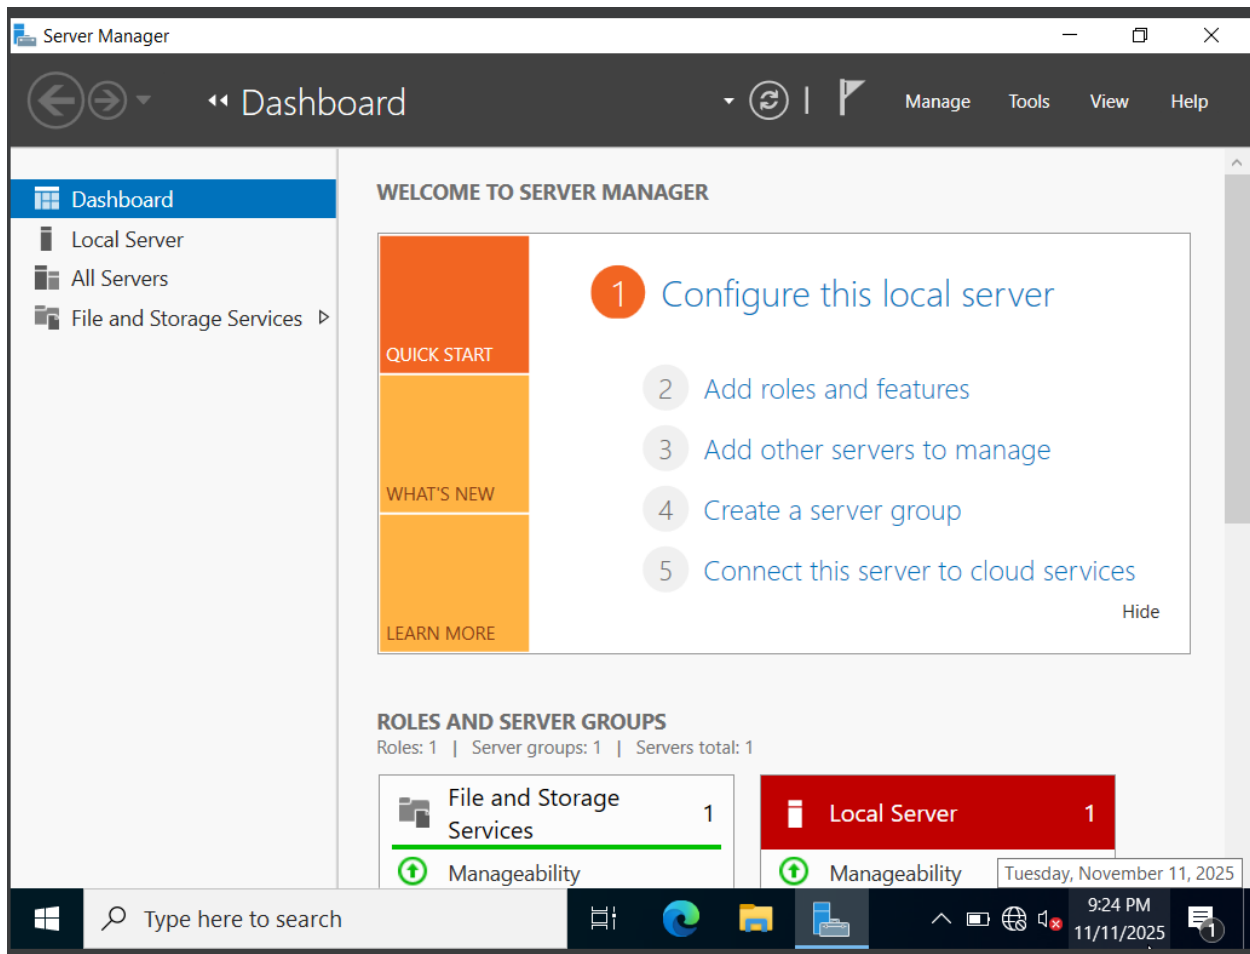

Figure 1:Server Manager – Dashboard

Step 2: Click “NEXT” to skip the before you login window.

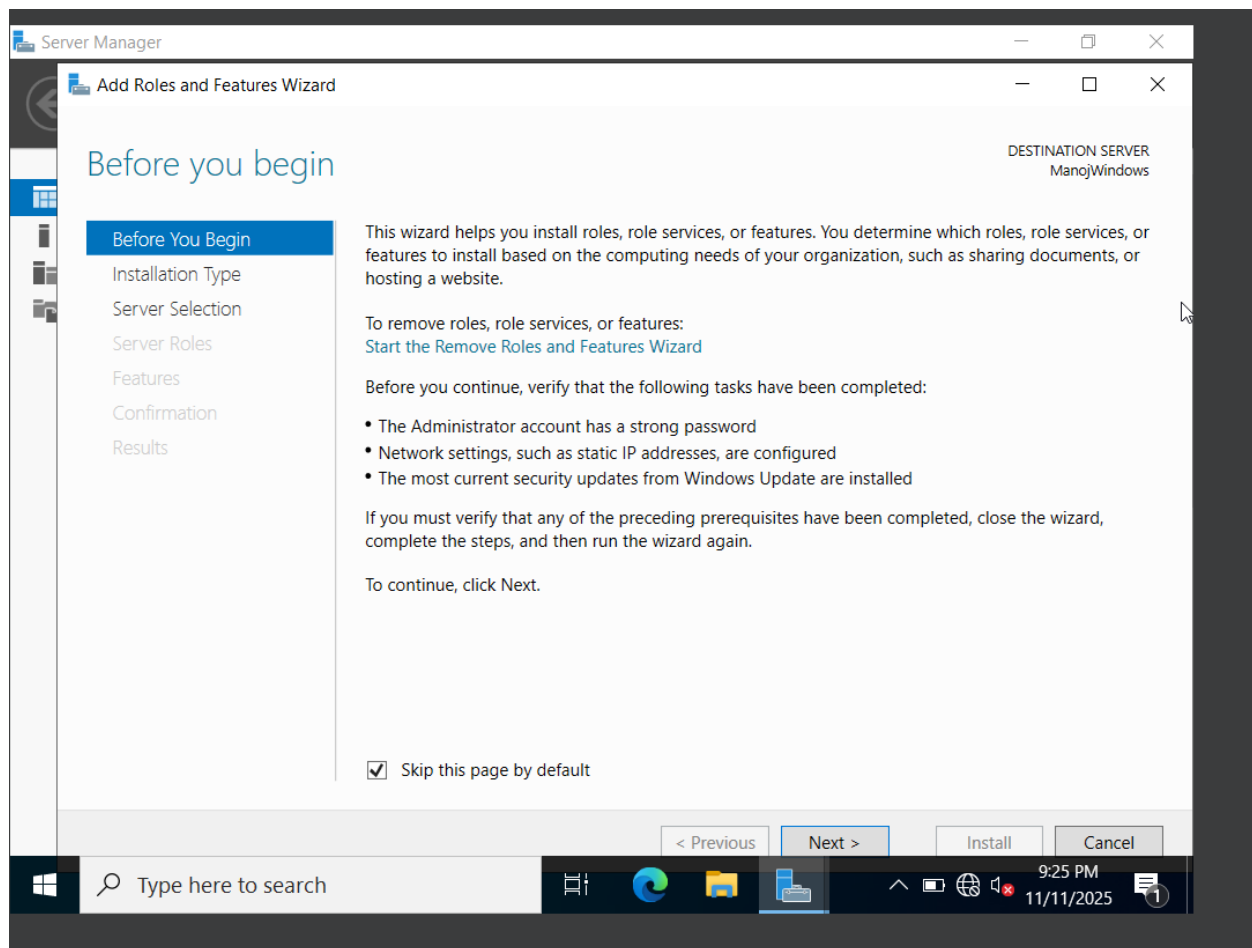

Figure 2:Before You Begin Window

Step -3: Select installation role- based or feature based installation type.

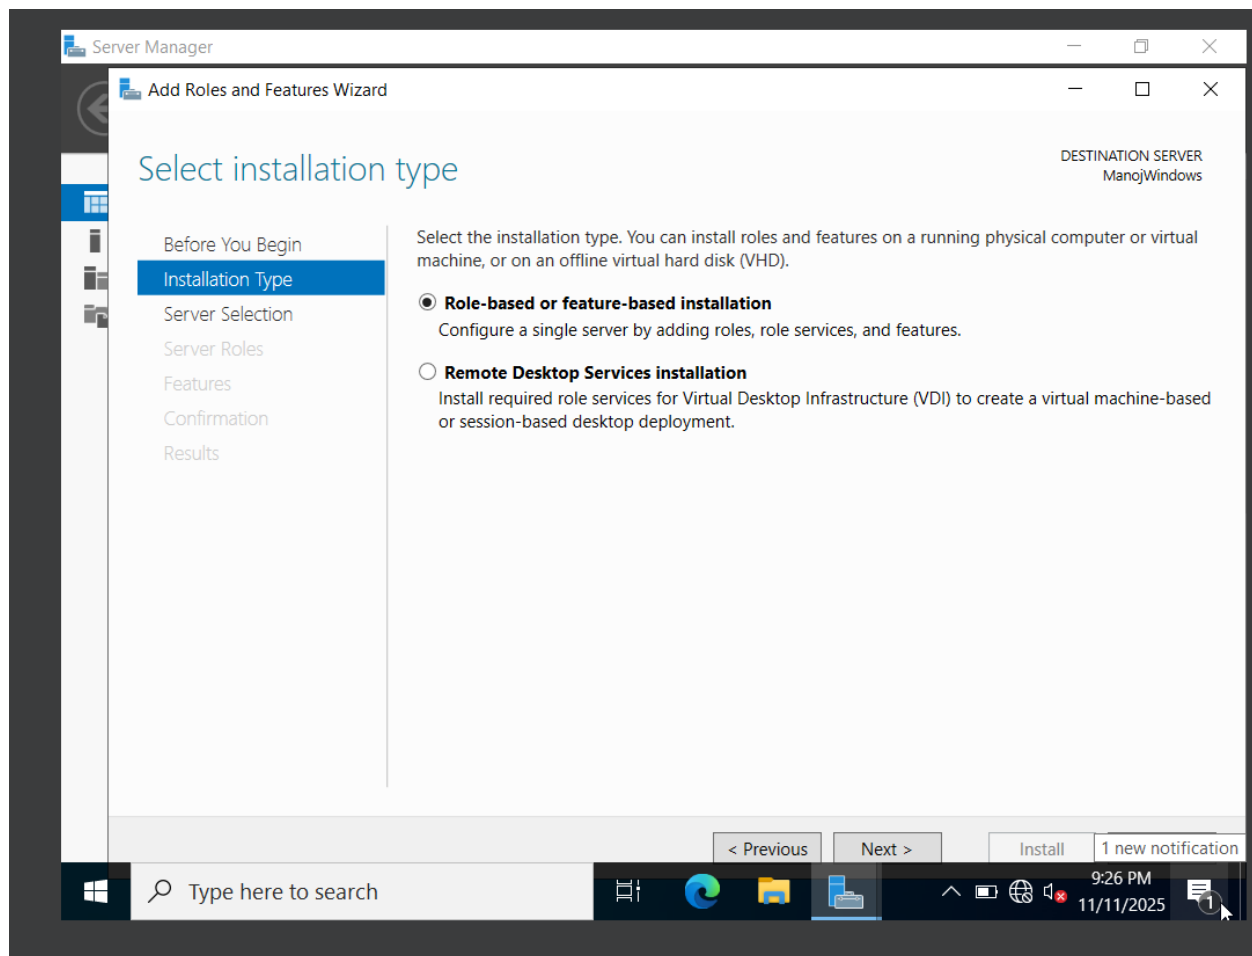

Figure 3:Select Installation Type

Step-4: Select the server and click Next.

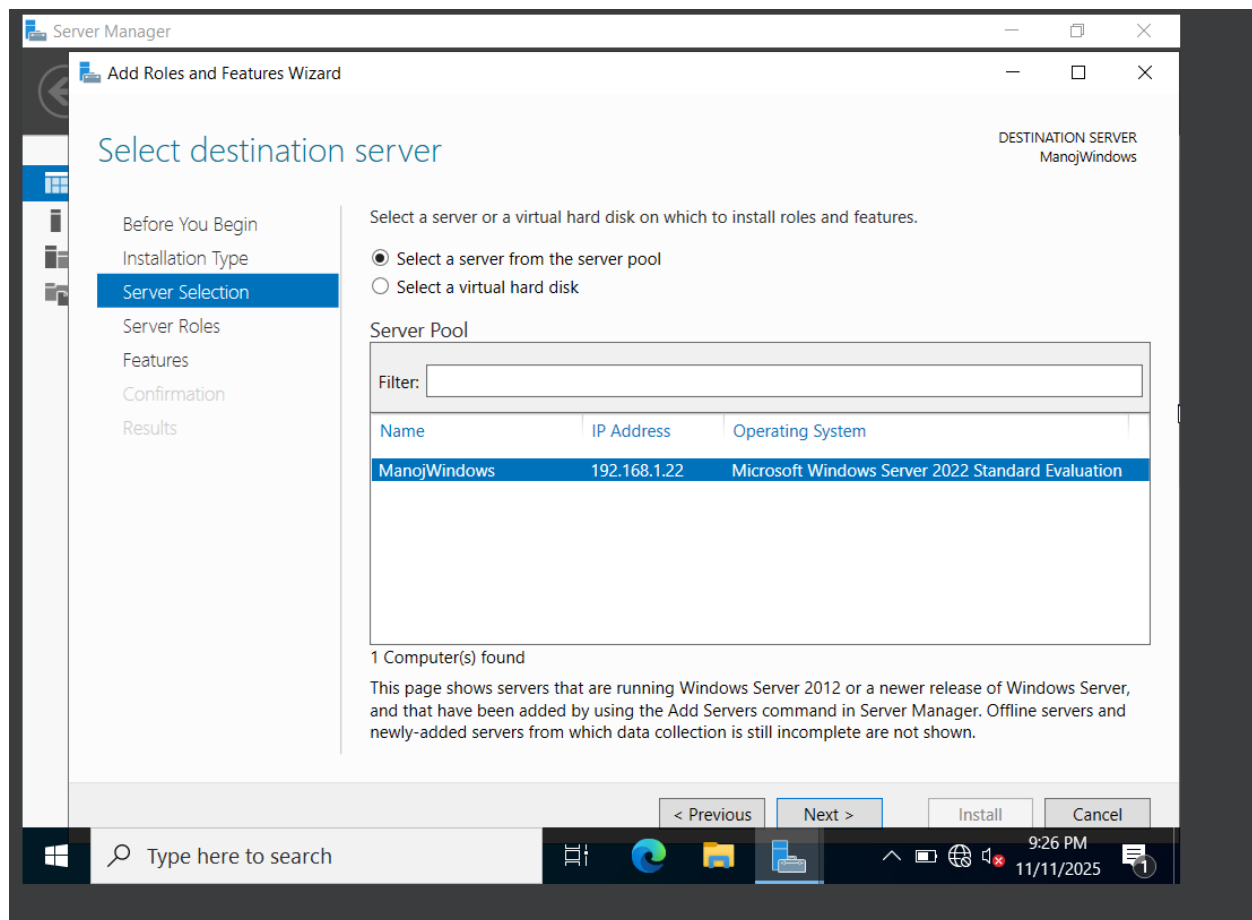

Figure 4: Selecting the server

Step 5: Click Web Server (IIS). A new popup will appear.

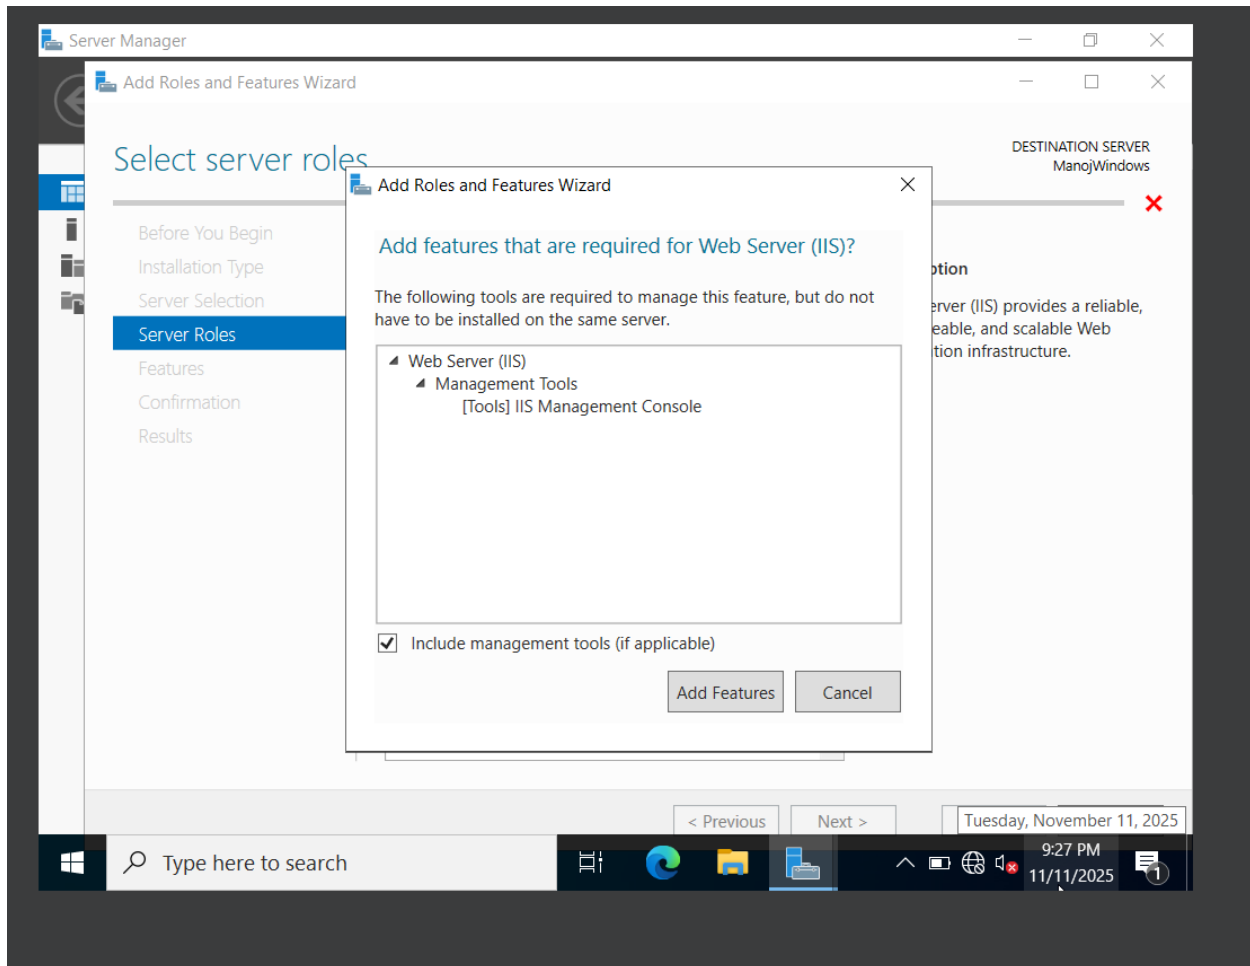

Figure 5: Web Server (IIS)

Step-6: A new popup is shown where many more feature is shown just check whether the IIS is selected or not and just click “NEXT” button.

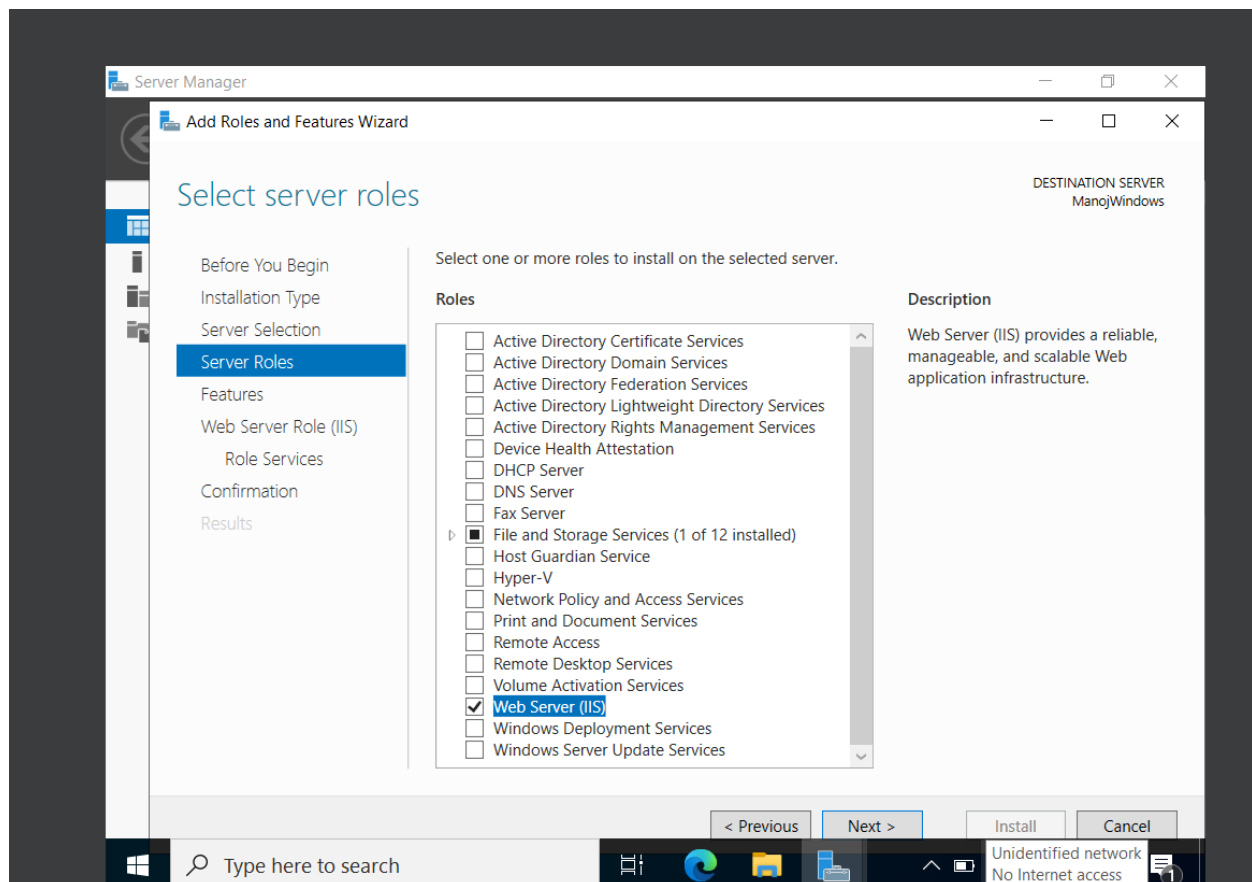

Figure 6: Server selection option

Step-7: Select .NET framework 4.8 Features and Click on “NEXT”.

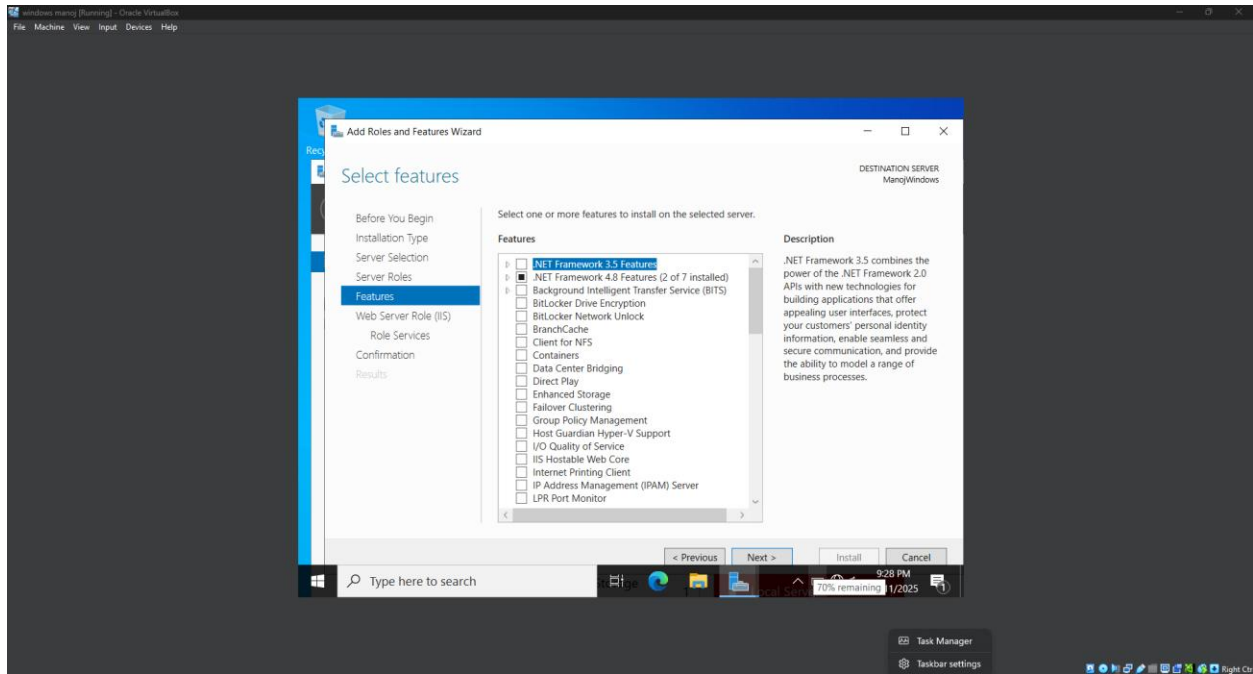

Figure 7:Selecting .NET Framework

Step-8: After clicking “NEXT” Web Server Role (IIS) popup is opened then Click again to continue the installation.

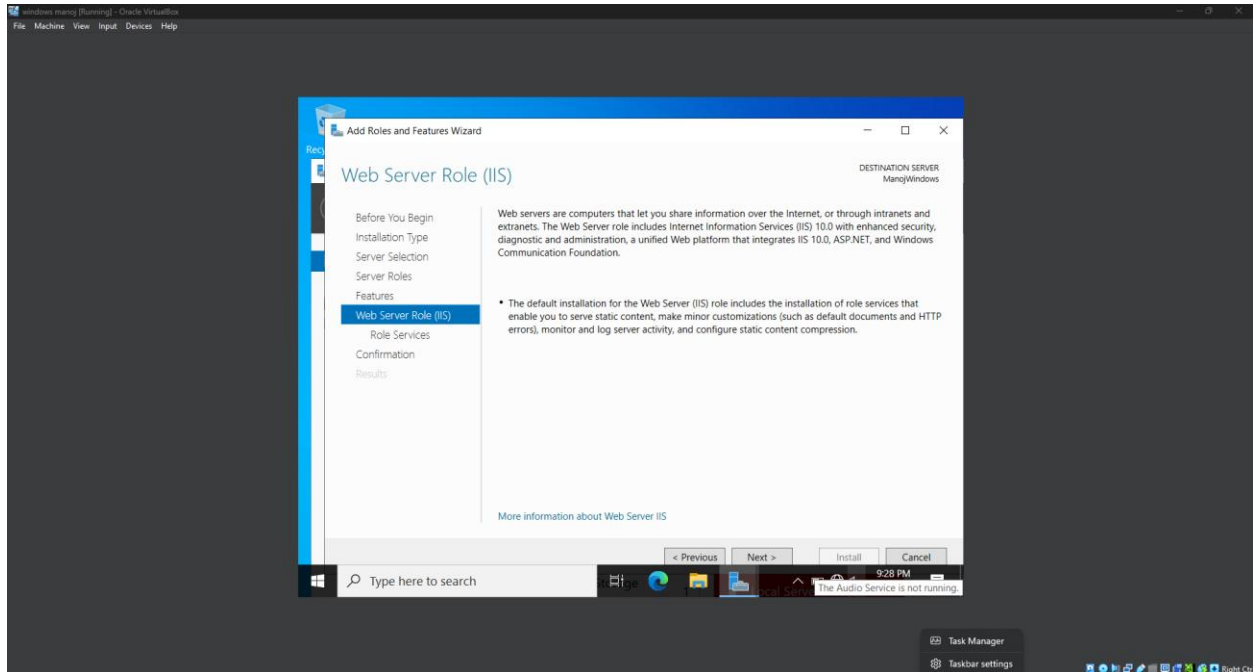

Figure 8:Web Server Role

Step-9: In next step, the role services has been open where the option will be automatically selected.

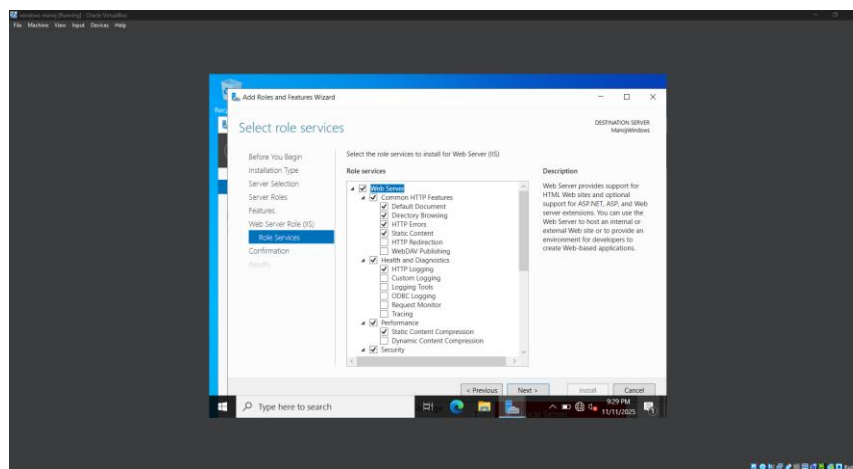

Figure 9:Selection of Role Services

Step-10: Confirm the installation selections and click on the install button to install the web server (IIS).

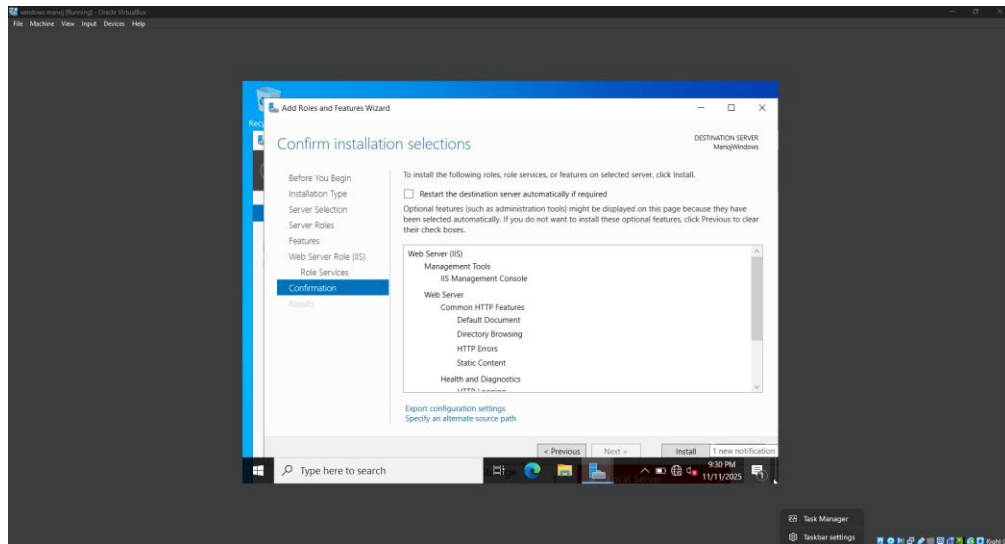

Figure 10: Confirm installation selections

Step-11: The installation has been started now.

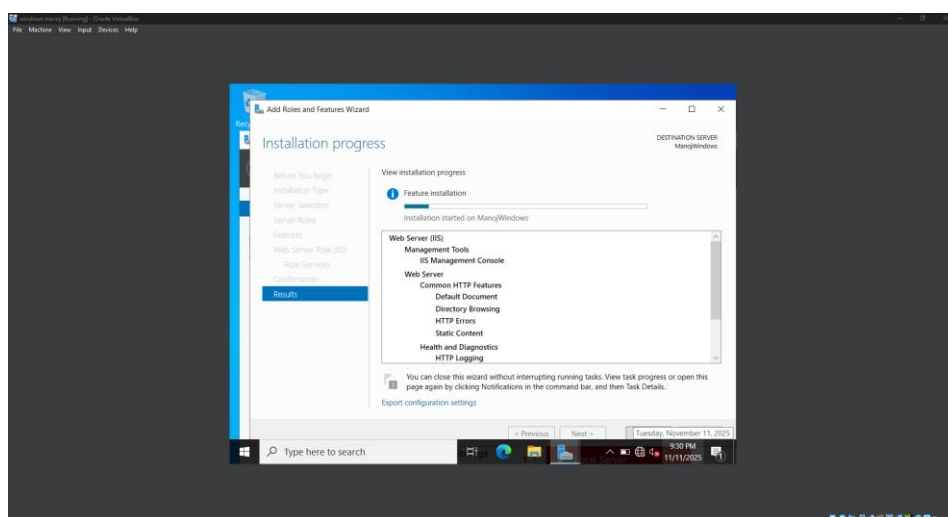

Figure 11 Installation start

Step-12: After completing installation the Server Manager dashboard will be opened.

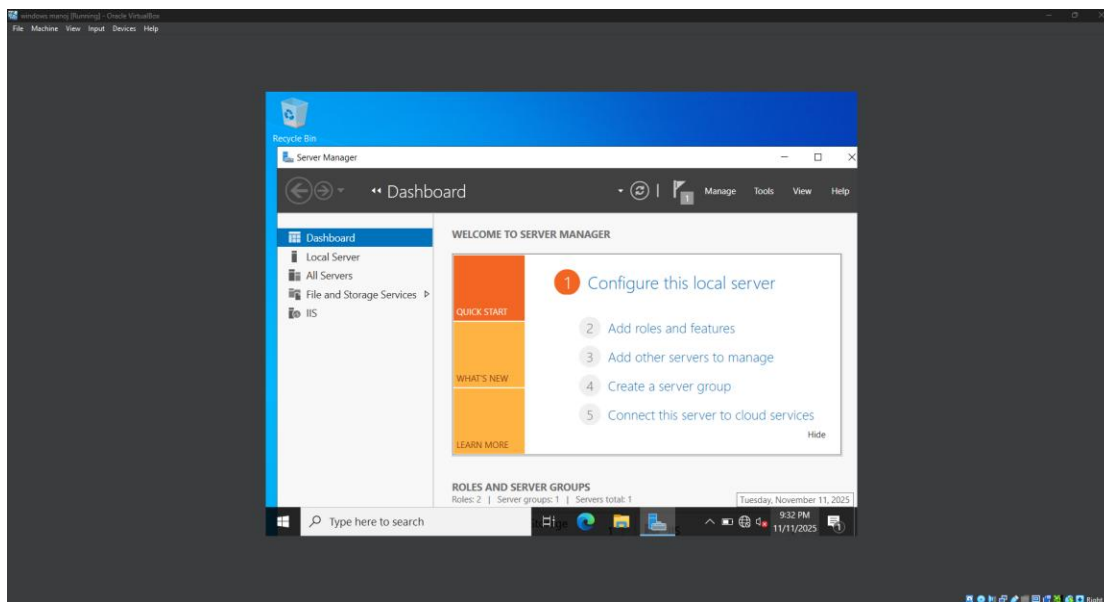

Figure 12: Finished Installation

Step-13: In dashboard, the top right corner there a tools button where the tools list is opened then select the Internet Information Services (IIS) Manager to continue the configure.

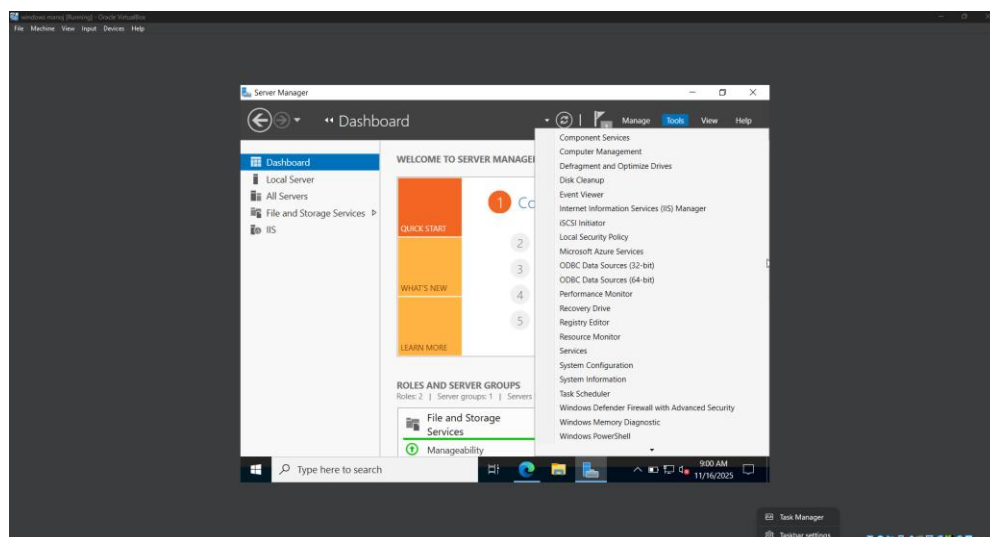

Figure 13: Dashboard - tools - IIS manager

Step-14: A new window will be opened then select the windows virtual machine to continue the process.

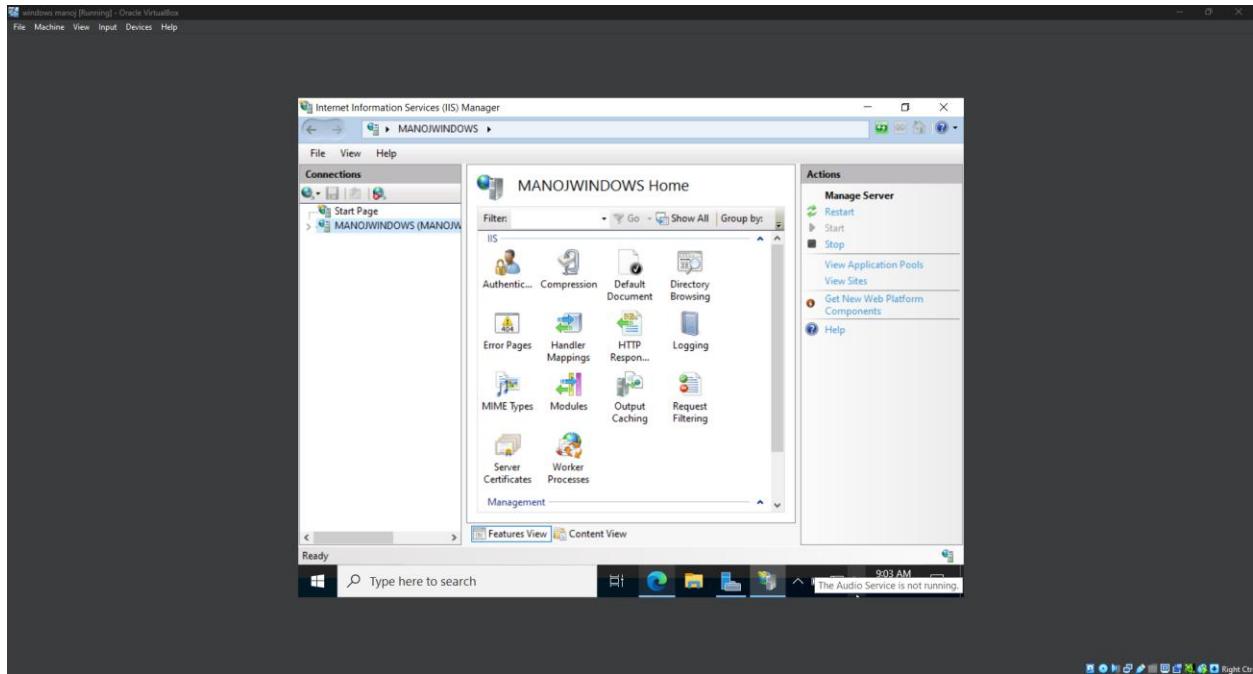

Figure 14: Selecting the virtual machine

Step-15: Click on the dropdown button. Now you may see “Sites” option.

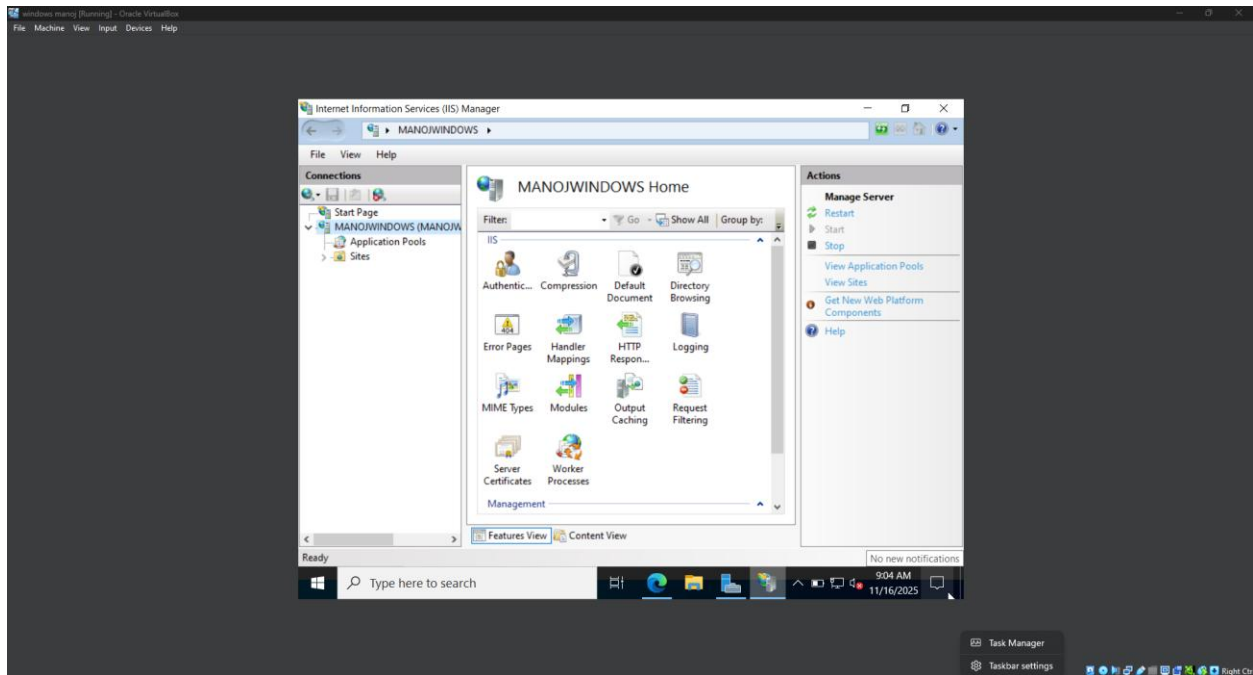

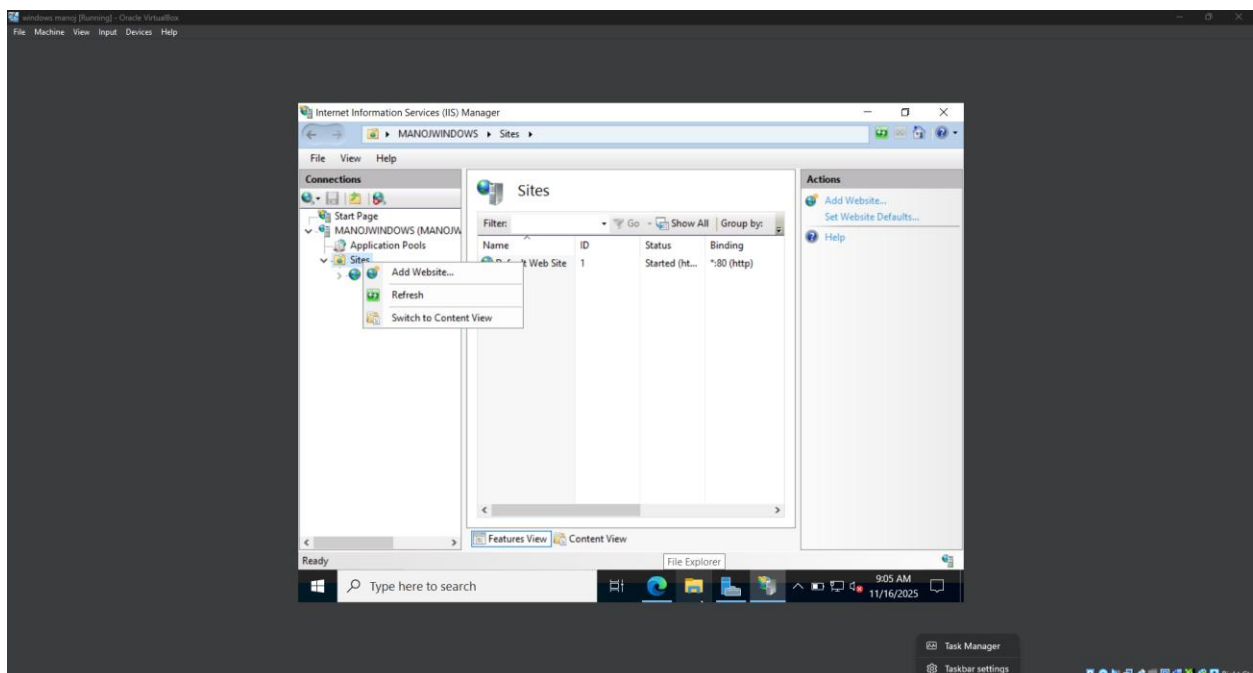

Figure 15: Windows server- dropdown

Step-16: Dropdown again the sites option you may see one site which is default website. Then add a new website by right clicking the “Sites”.

Step-17: Now we need to add some credentials.

Give the site name to “mysite.local”.

On physical path select the file where the files is located whom you want to host on a web .

On host name we need to add “mysite.local”

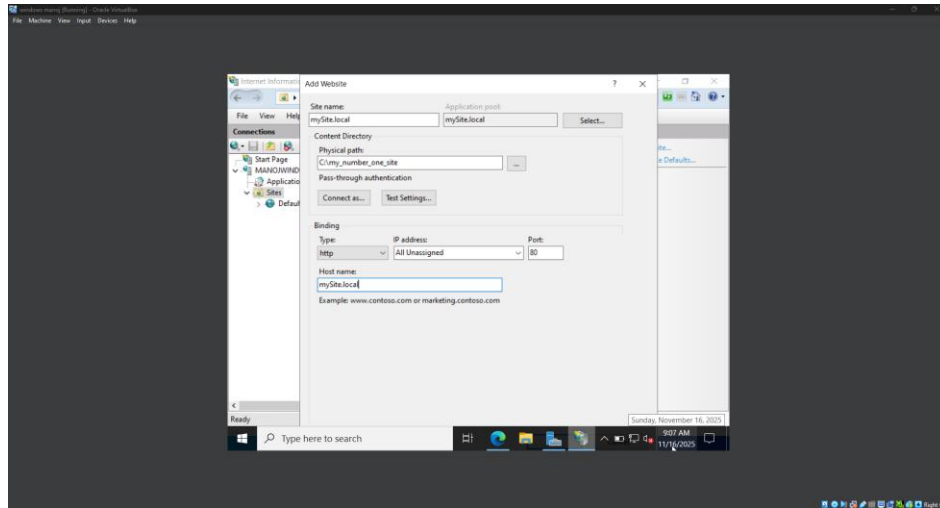

Figure 16: Adding the website credentials to be hosted

Step-18: Now we can see our site has been listed. We can search our site by typing “mysite.local” on web browser in windows server.

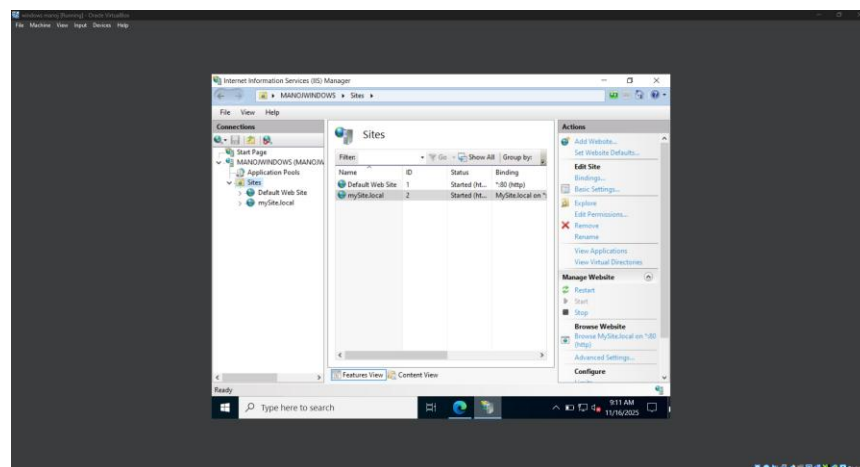

Figure 17:listed web site

Step-19: if you faced this problem that means we need to register our site in host file too.

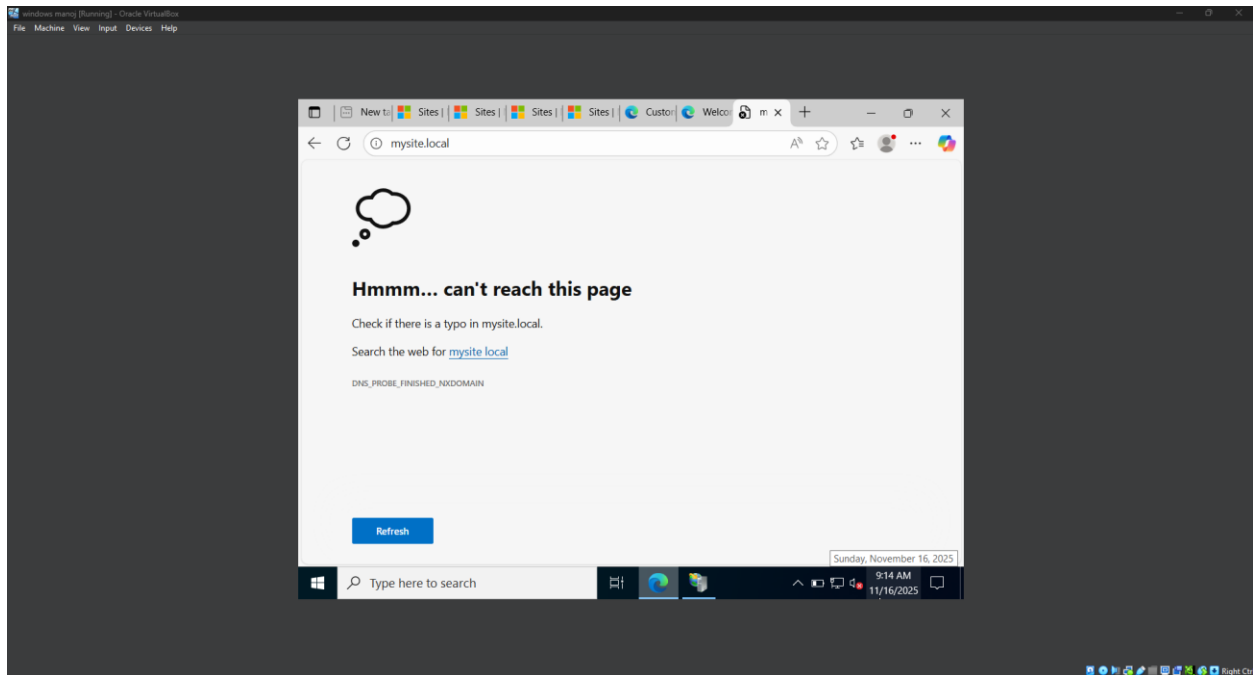

Figure 18:webhosting-error

Step-20: To register the site in host file, we need to go to the hosts file where the file is located and open the file in text-editor like notepad.

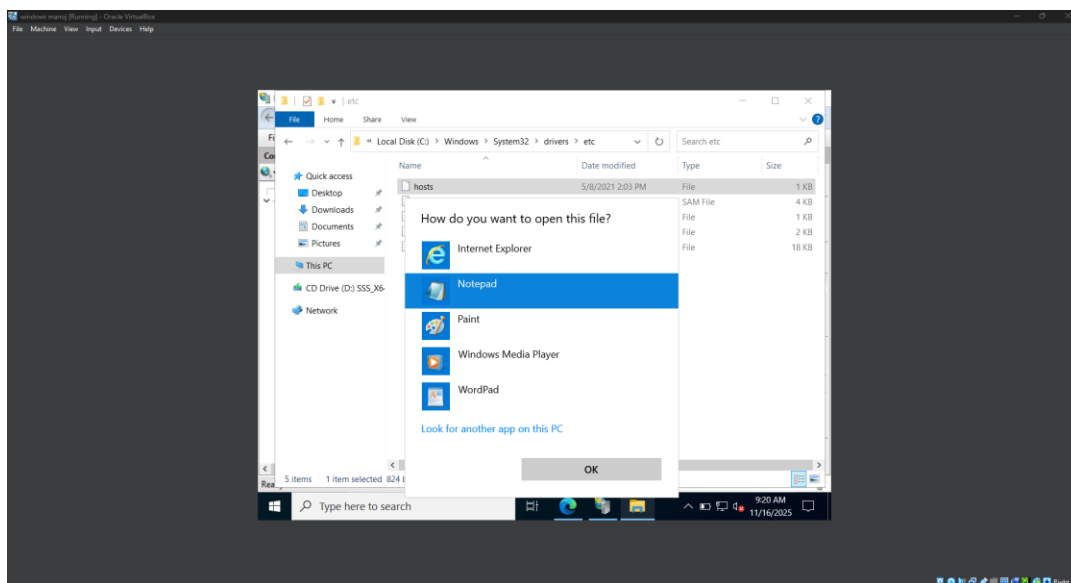

Figure 19:Opening host file in Notepad

Step-21: At the bottom of the notepad we can see the DNS 127.0.0.1 mysite.local

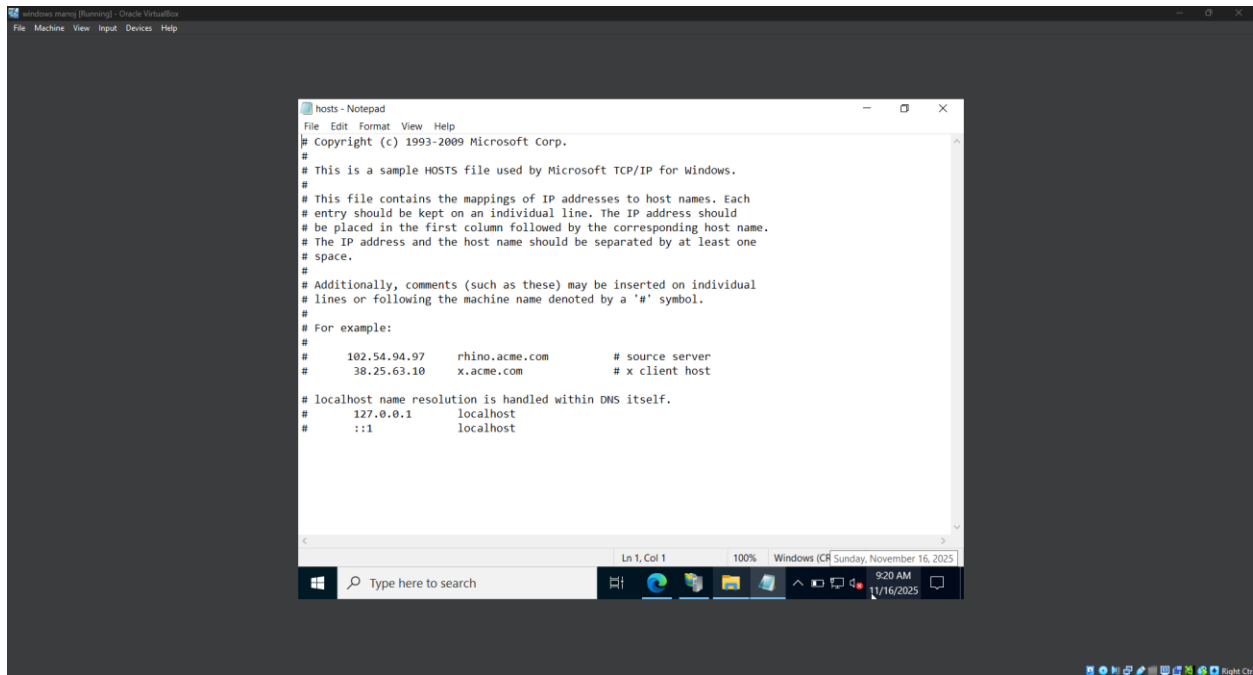

Figure 20: Opening the file in notepad

Step-22: Now reload the web page, then the website has been loaded successfully.

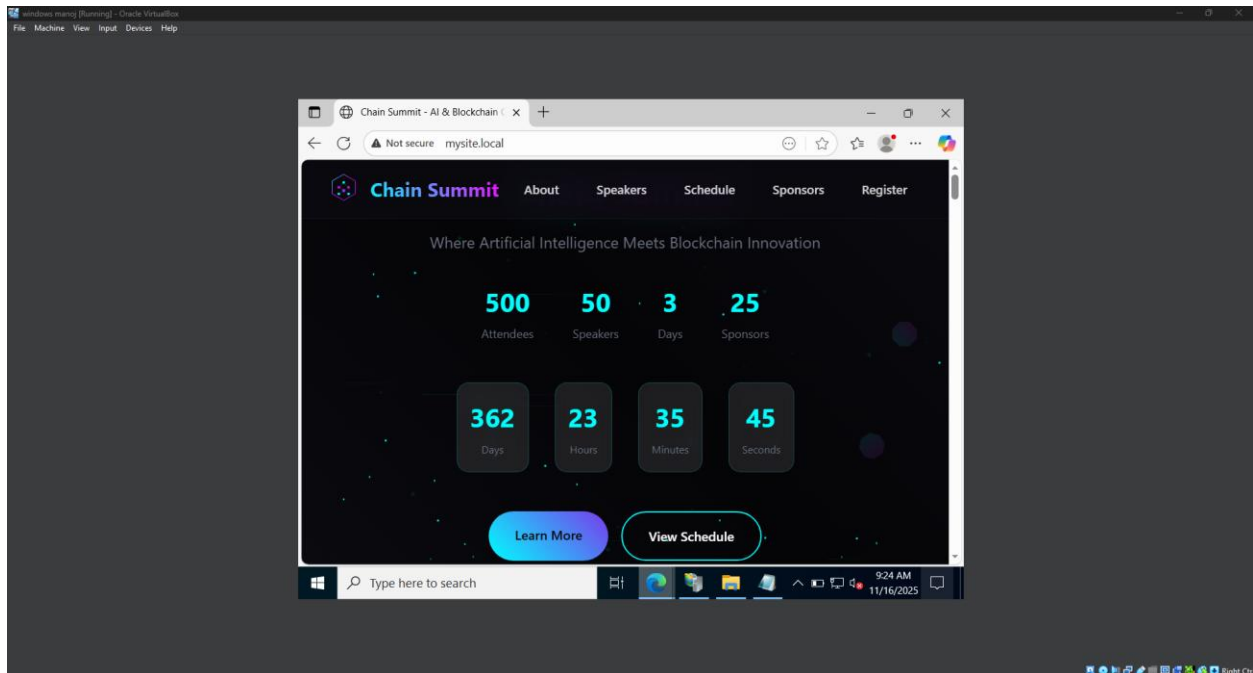

Figure 21: Hosting web page

1.5 Conclusion

In this lab, we learned how to setup a webs server on Windows Server 2022 using Server Manager. To test ,the web server whether the displaying or not for that we copy the web page content from default browser and manage to display that successfully on the server itself. Everything work perfectly, proving that windows server 2022 is reliable system for hosting websites.
