

Module Code & Module Title

Level 5 – Network Operating Systems

Assessment Type

Logbook 3

Semester

2025/26 Spring/Autumn

Student Name: Manoj Katuwal

London Met ID: 24045922

College ID: np05cp4a240306

Assignment Due Date: Tuesday, November 11, 2025

Assignment Submission Date: Wednesday, November 12, 2025

Submitted To: Santosh Parajuli

I confirm that I understand my coursework needs to be submitted online via Google Classroom under the relevant module page before the deadline in order for my assignment to be accepted and marked. I am fully aware that late submissions will be treated as non-submission and a mark of zero will be awarded.

1 Windows Server Initial Configuration Using Server Manager

1.1 Aim

To perform some configuration task in Windows server 2022 virtual box using Server Manager and PowerShell.

1.2 Objective

- Renaming the server name.
- Configuring static ipv4 IP address.
- Enabling remote desktop.
- Changing the time zone

1.3 Required tools and concept

- Windows server 2022 installed in virtual box.
- Administrator account.
- Server Manager
- PowerShell

1.4 Steps Required for Lab

1.4.1 Changing the Server name

1. Open server manager dashboard and move to Local Server

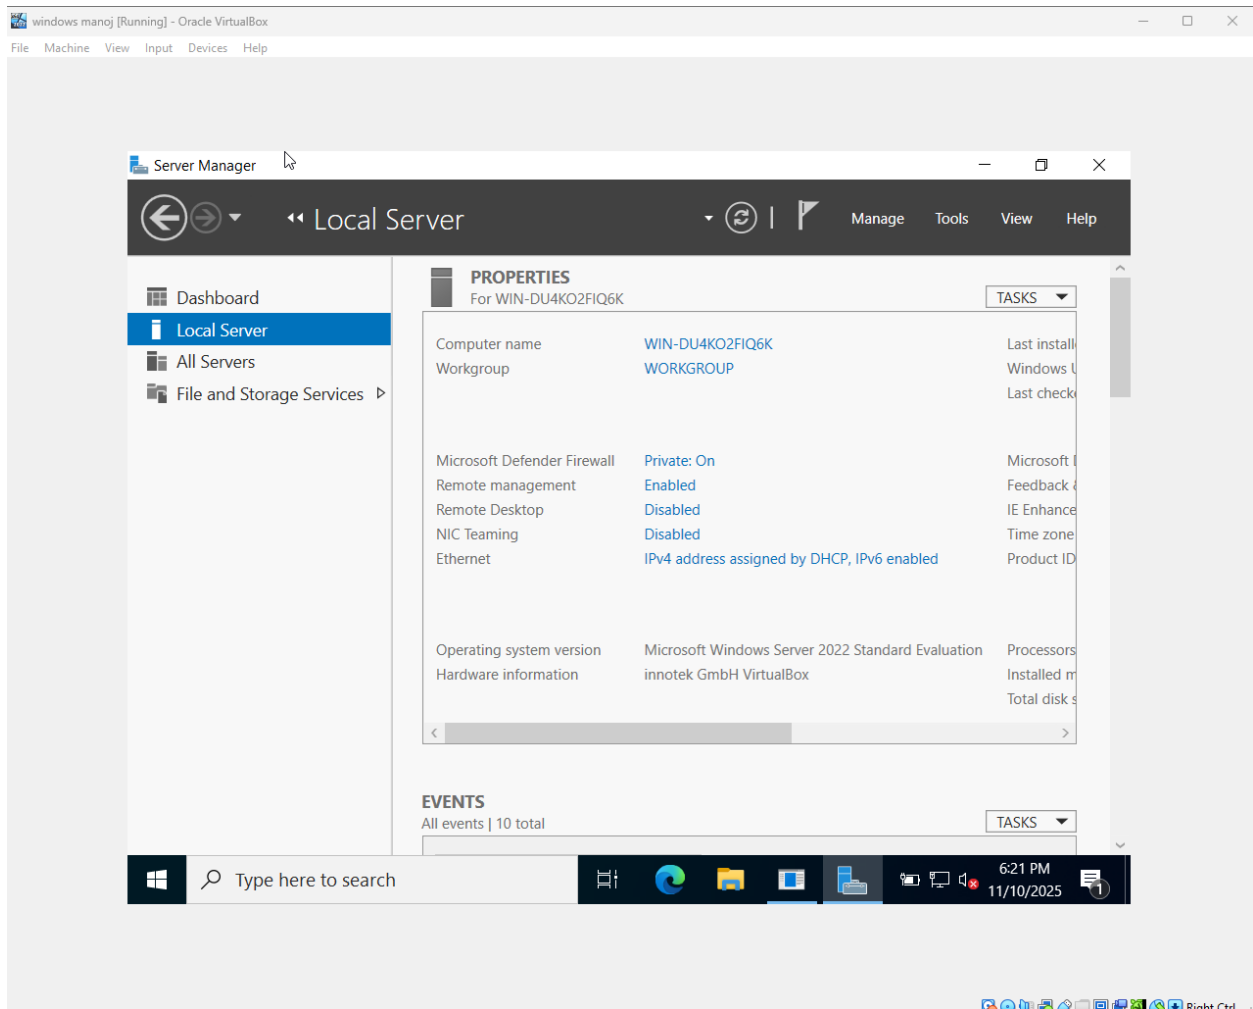

Figure 1: Server Manager - Local Server

2. Click on the default computer name link which will open the new tab.

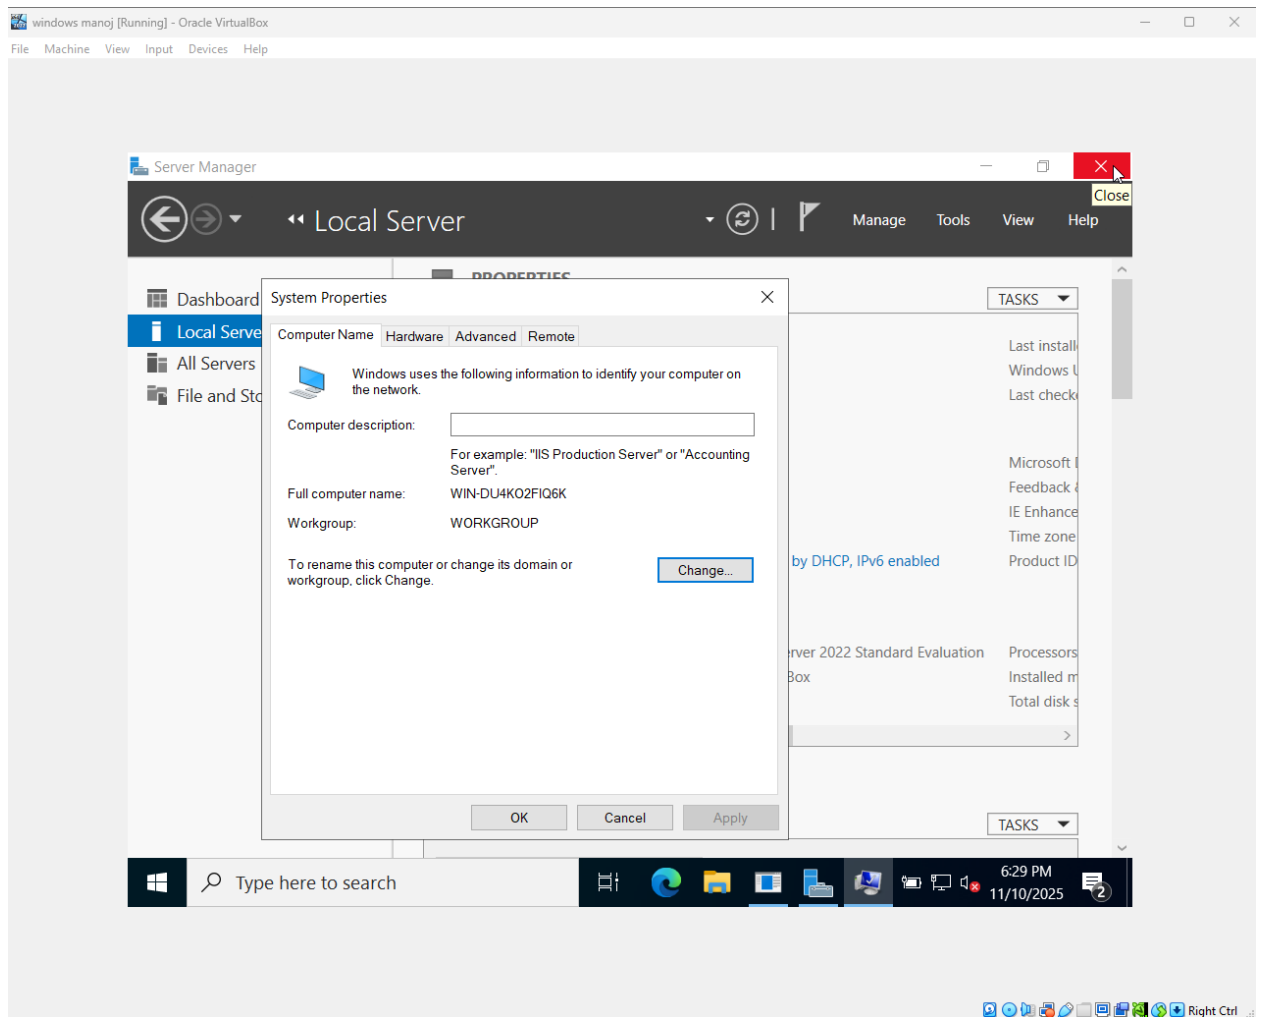

Figure 2: Computer Description Tab

3. Skip the part of computer description and click the button change and change the name according to you will.

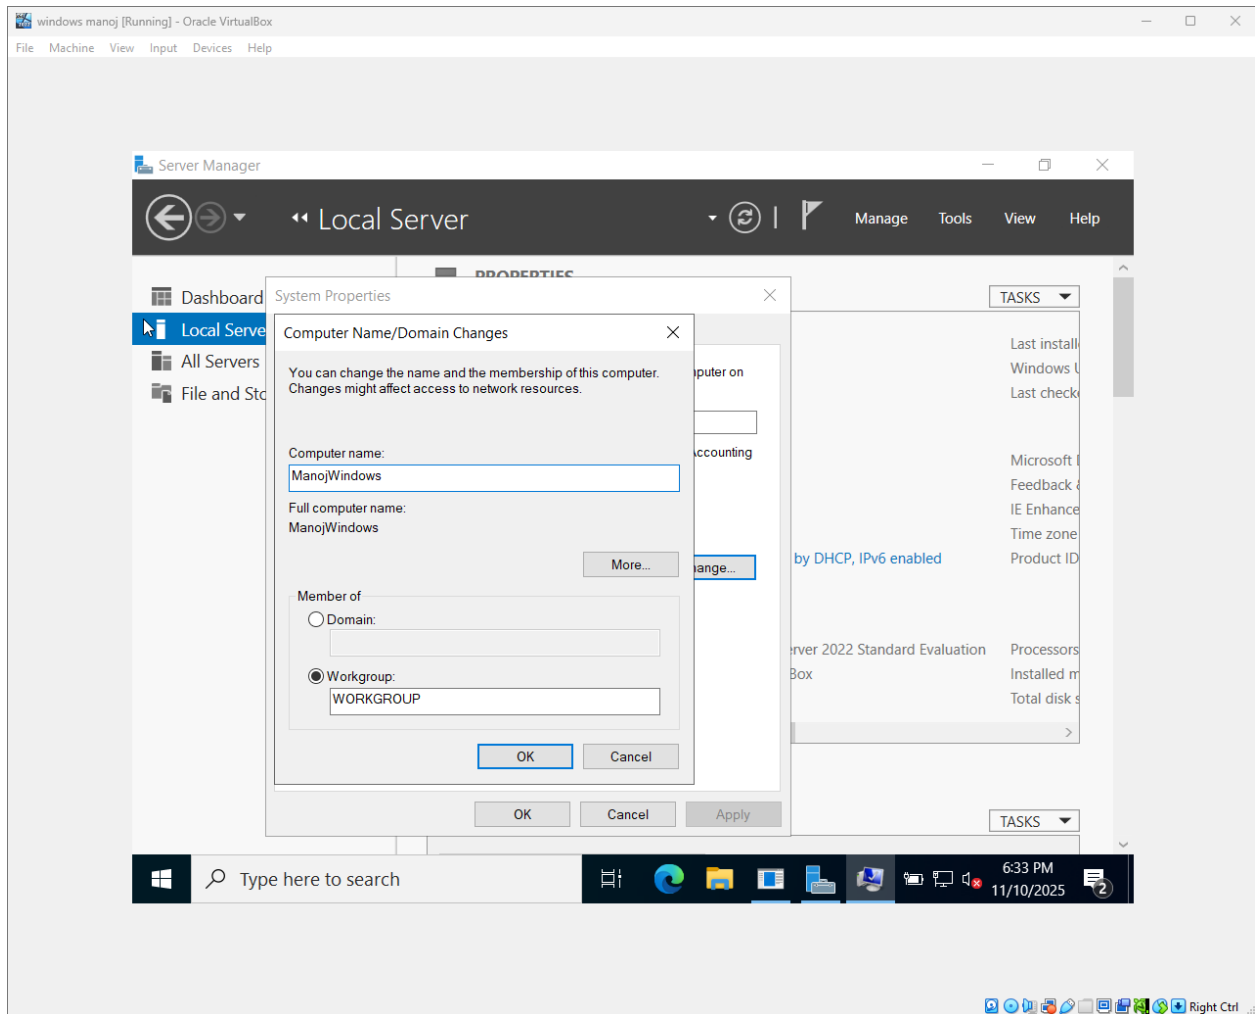

Figure 3: Computer name - domain changes

4. After typing the new computer name press the button ok a new restart popup is shown.

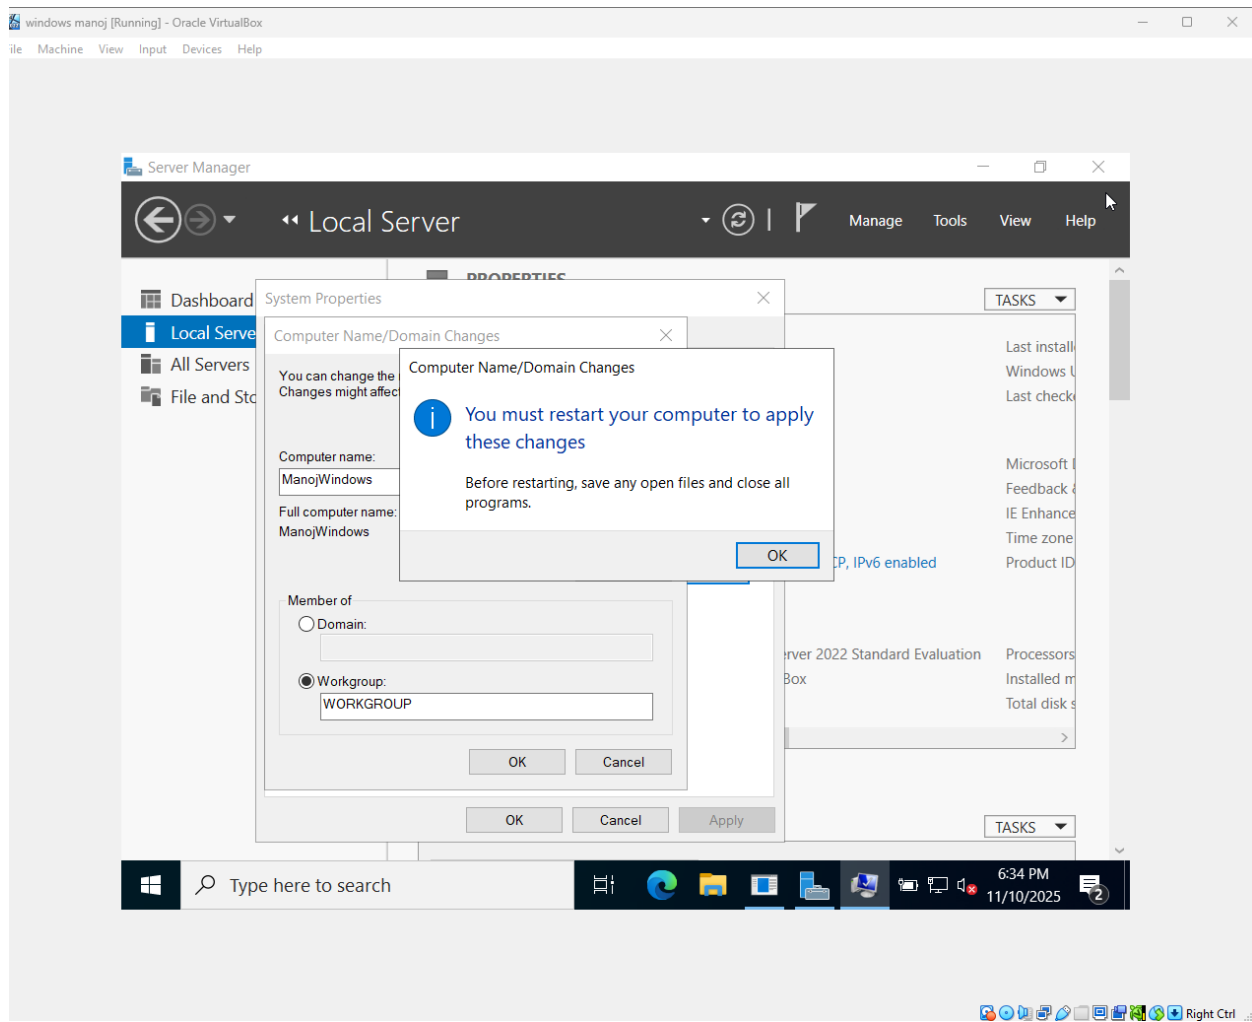

Figure 4: Restart Popup

After restarting your computer your computer name has successfully changed.

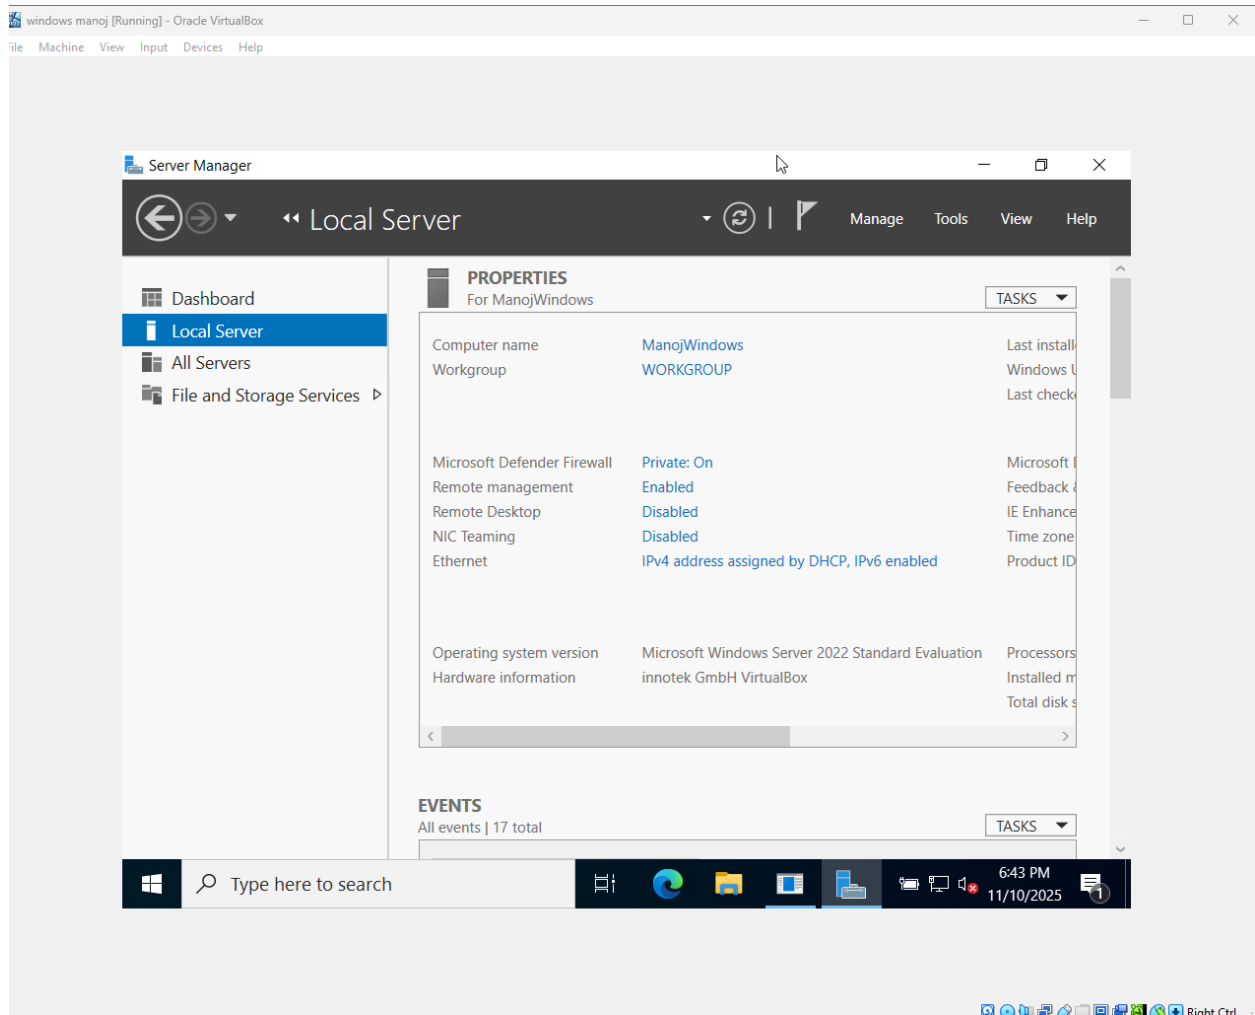

Figure 5: New Name Display

1.4.2 Enabling Remote Desktop

Open server manager and open local server tab and then clicked the remote desktop properties which is by default disabled.

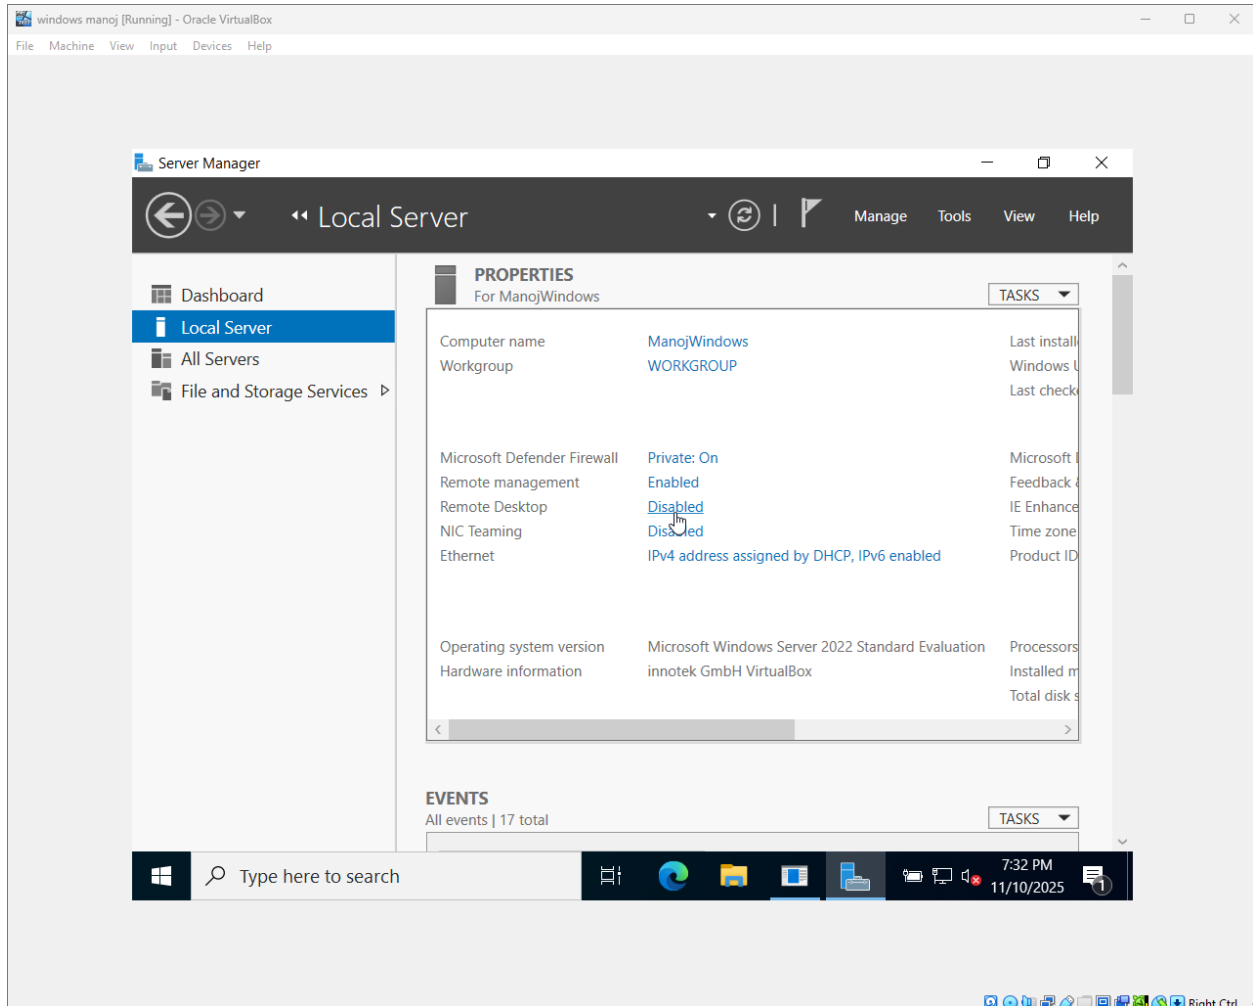

Figure 6: Local Server - remote desktop

From here a warning pop up is shown Click “OK” to enable the windows firewall with advanced security will enable and after that give permission to allow remote connection to the computer.

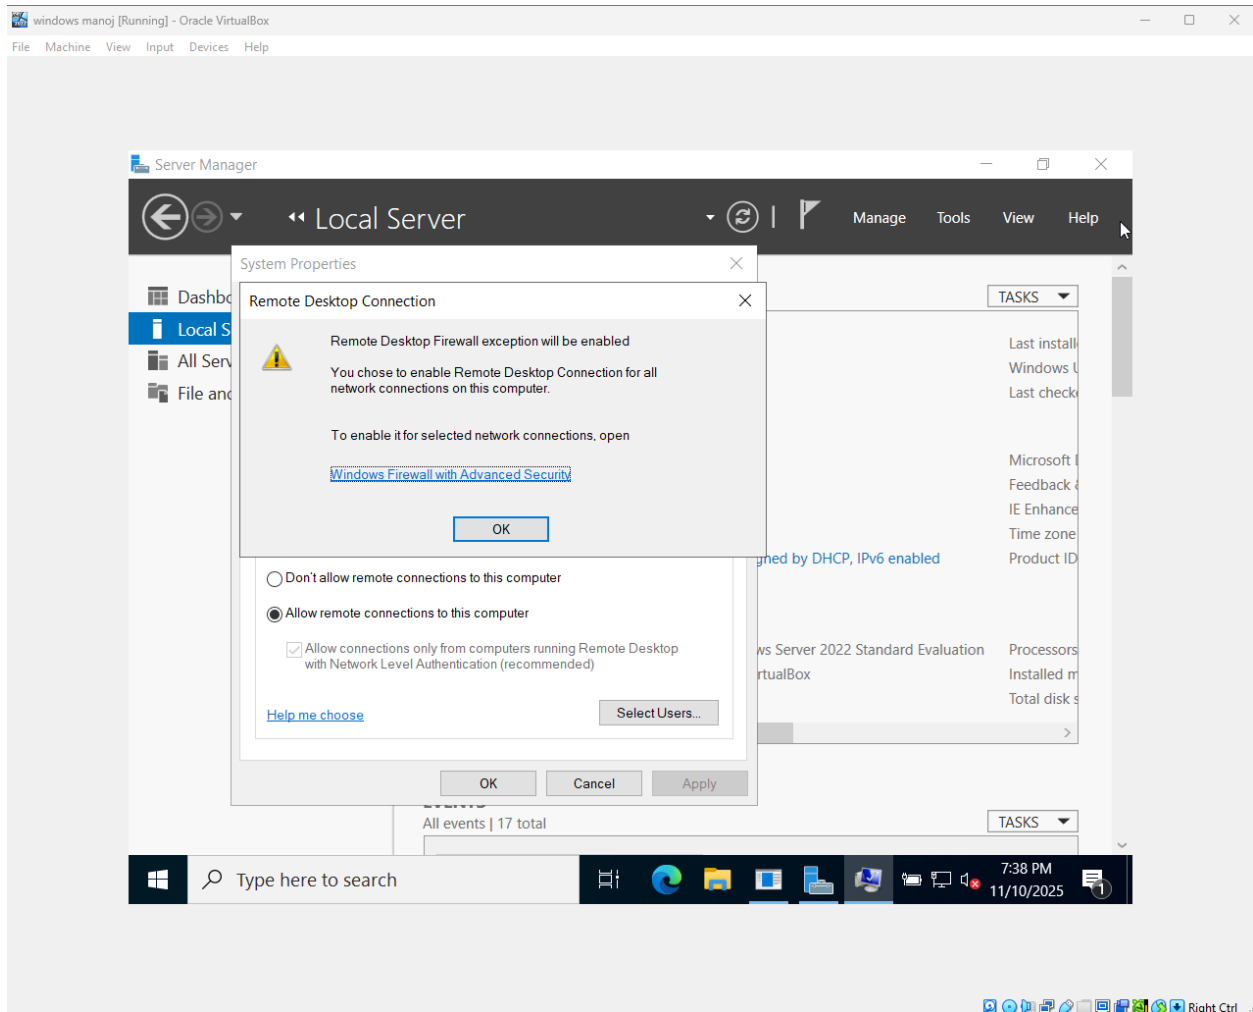

Figure 7: Windows firewall security

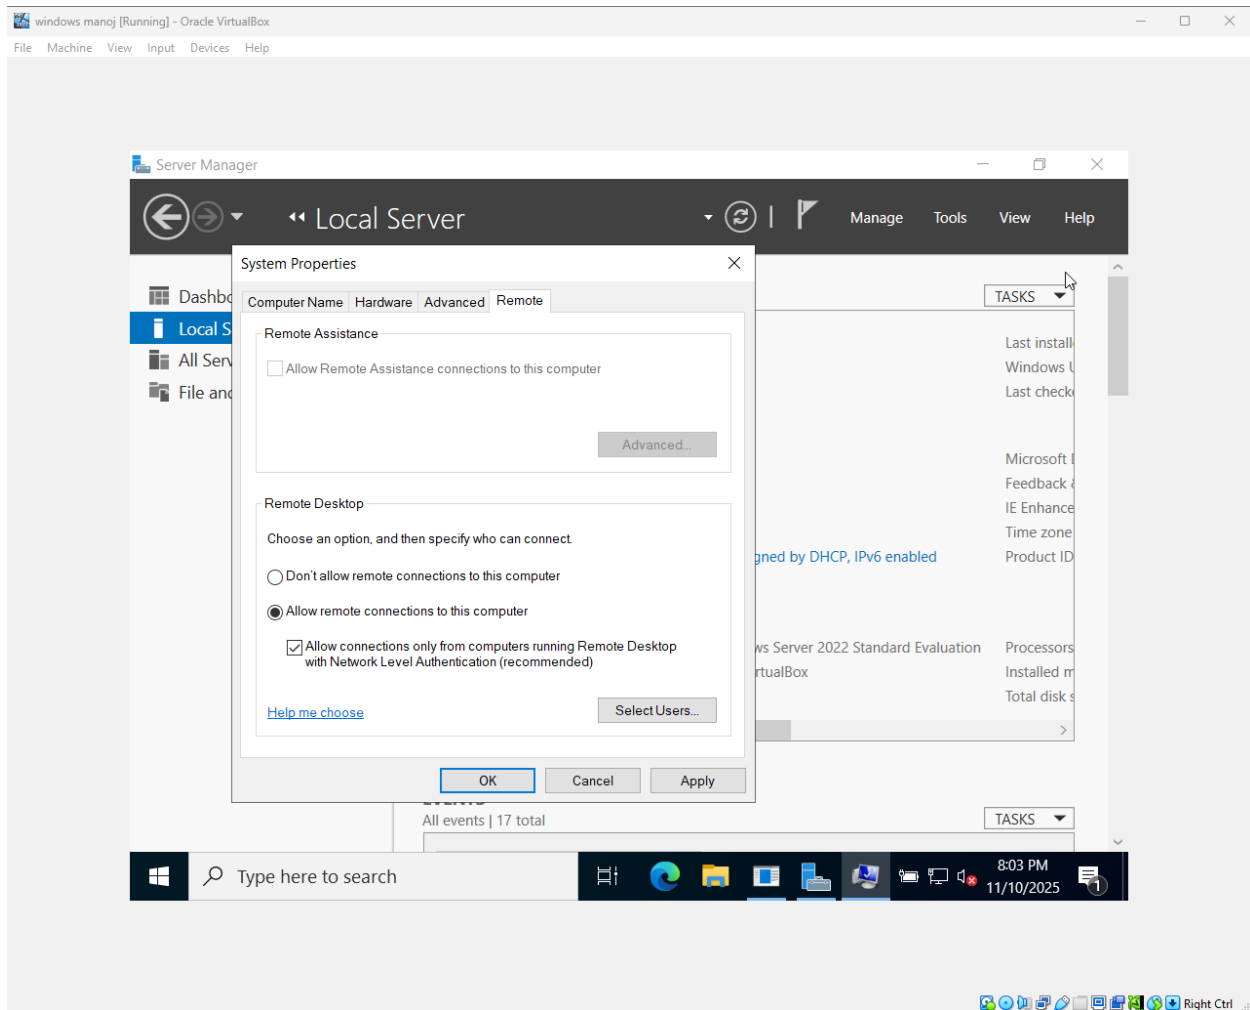

Figure 8: Allowing remote connections

1.4.3 Setting up Static IP address

To set the IP address, click right mouse it shows list of network adapters connected to the server.

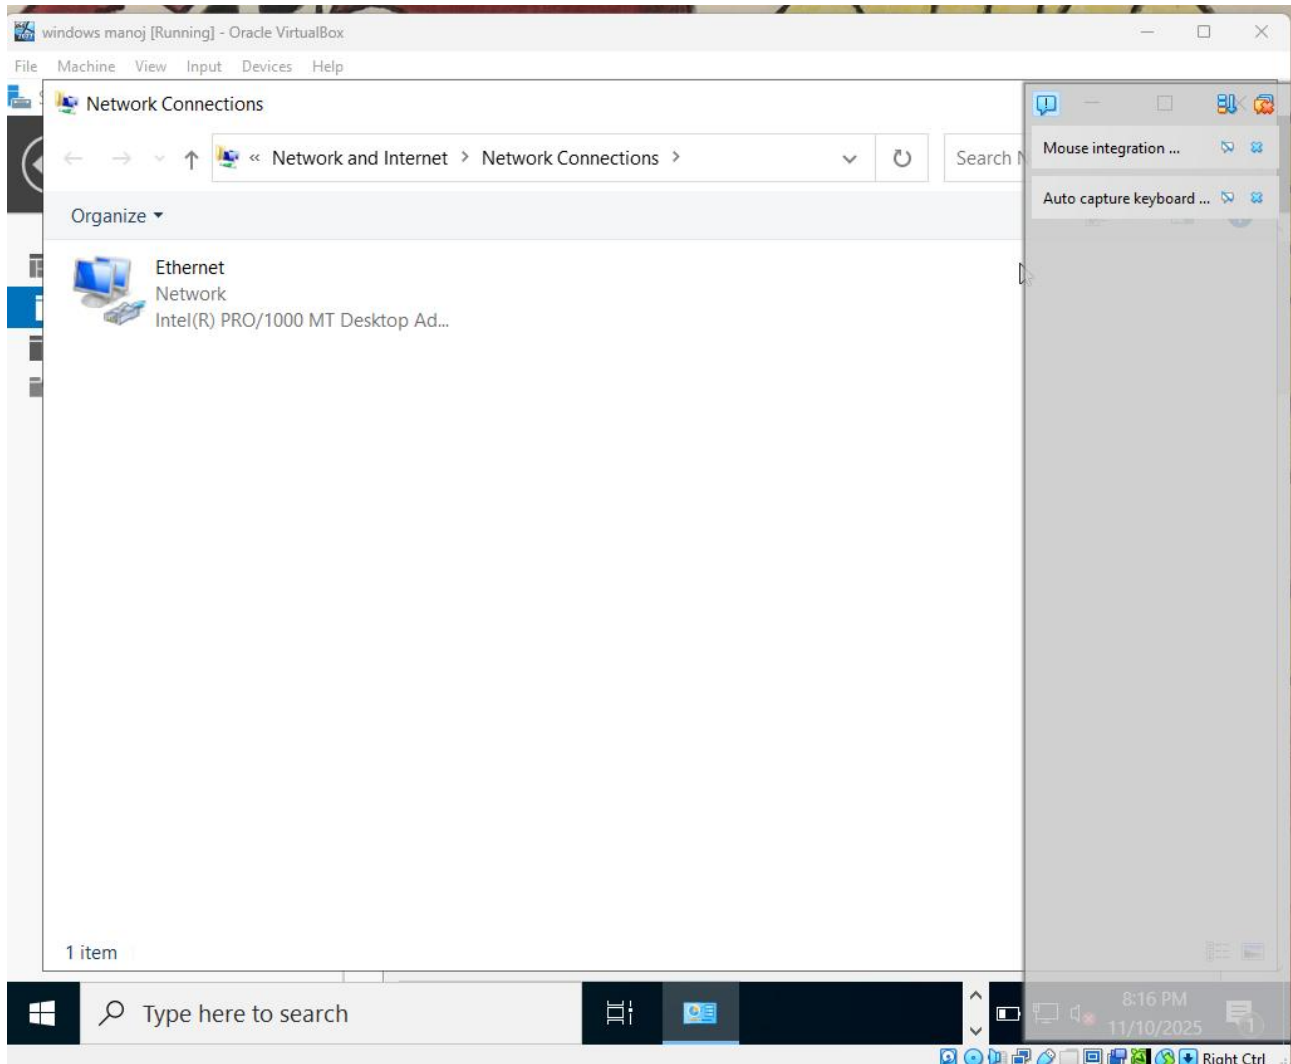

Figure 9: Ethernet tab

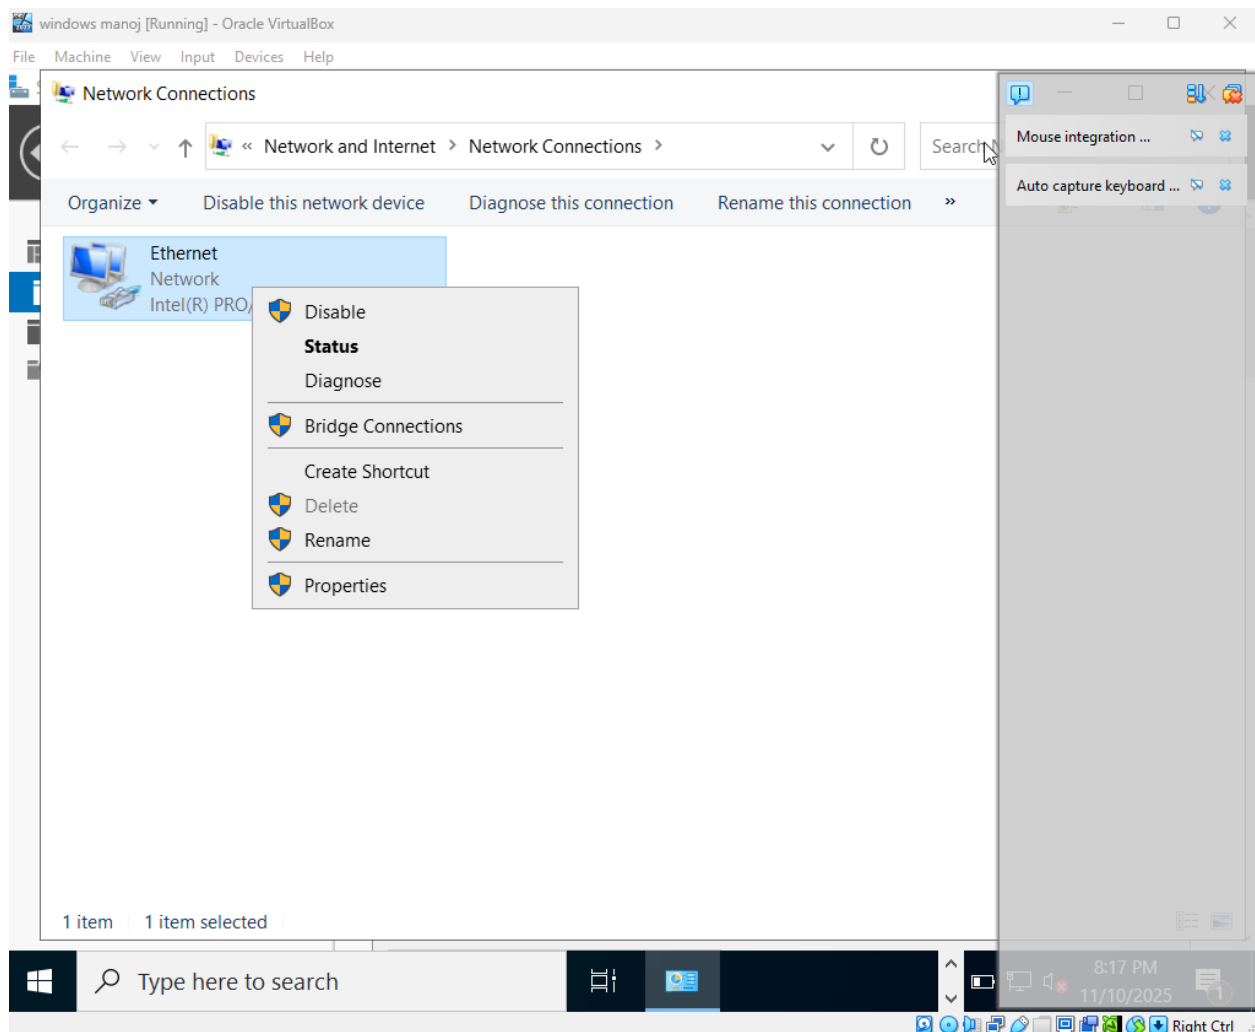

Figure 10:List of Network adapters connected to server

From the list, double click on the properties then a new window is shown where all Ethernet properties is shown and from that double click on the internet protocol version 4(TCP/IPv4).

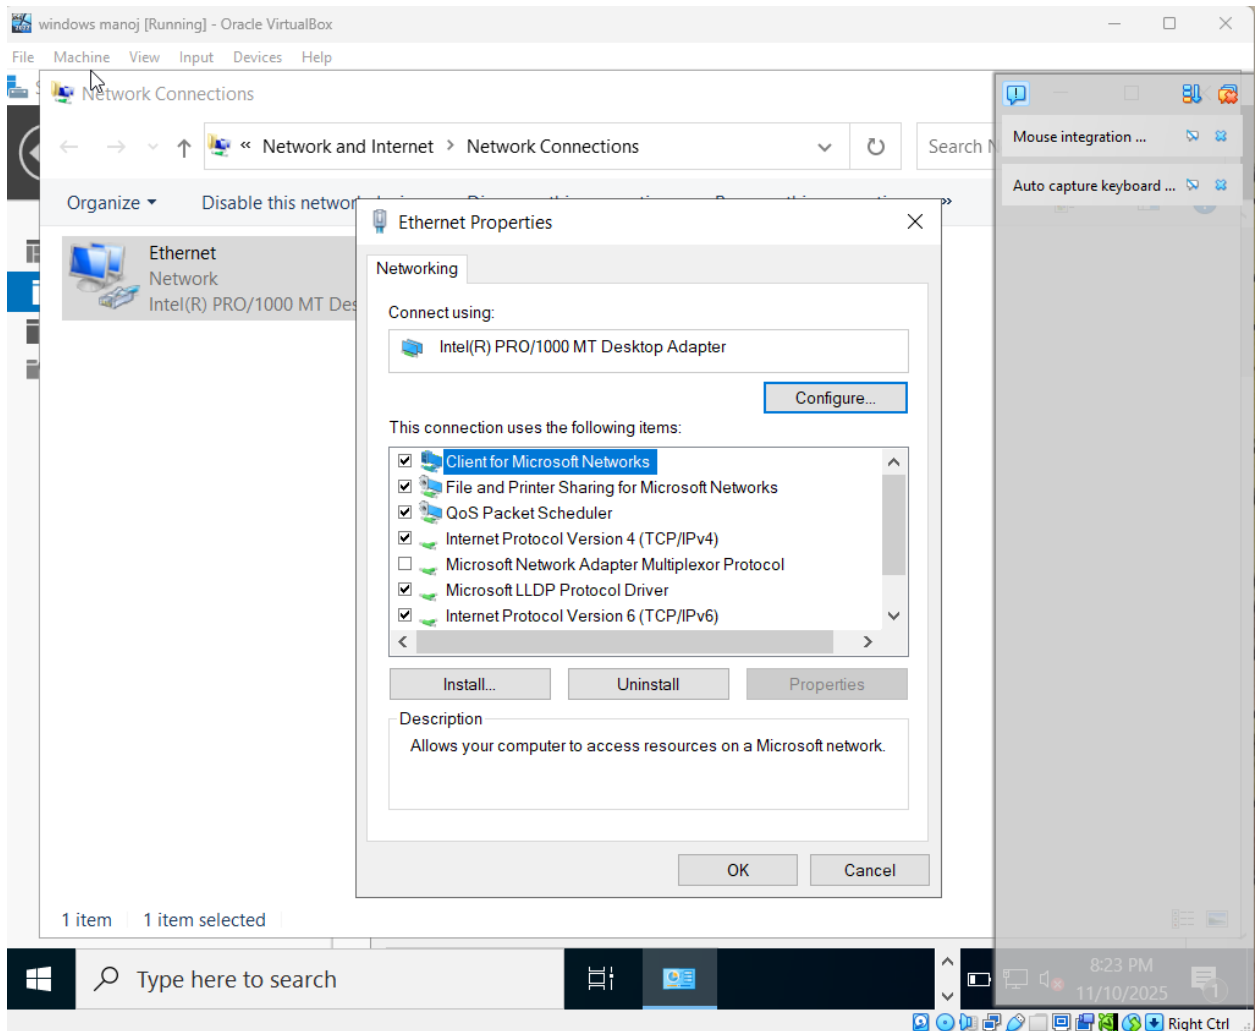

Figure 11: Ethernet Properties

After double click on the internet protocol version a new window is shown where we can enter the IP address.

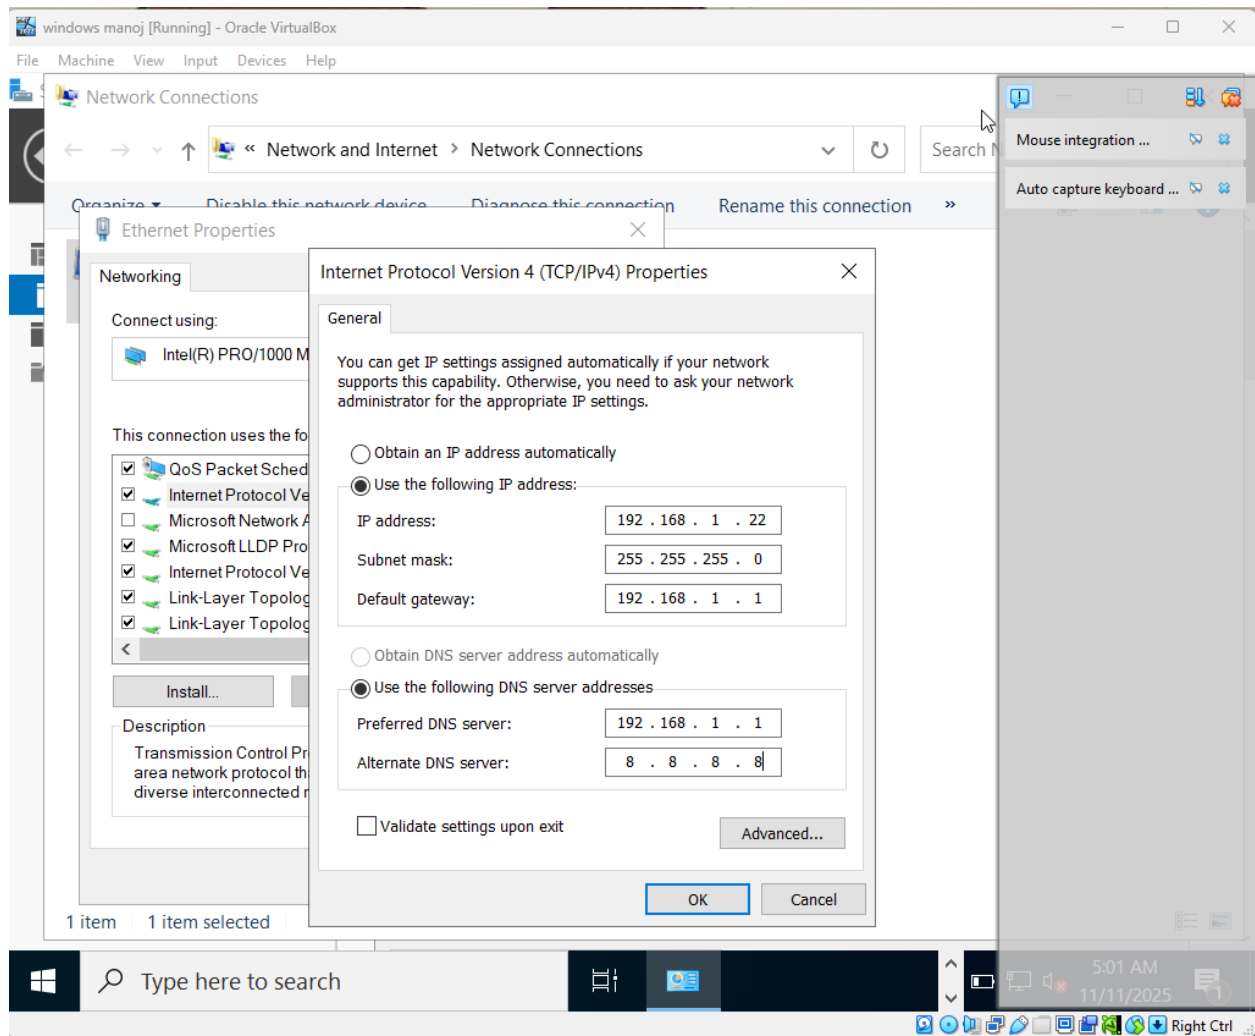

Figure 12:IP address insertion

1.4.4 Changing the time zone

To change the time zone, click on the time zone menu on server manager.

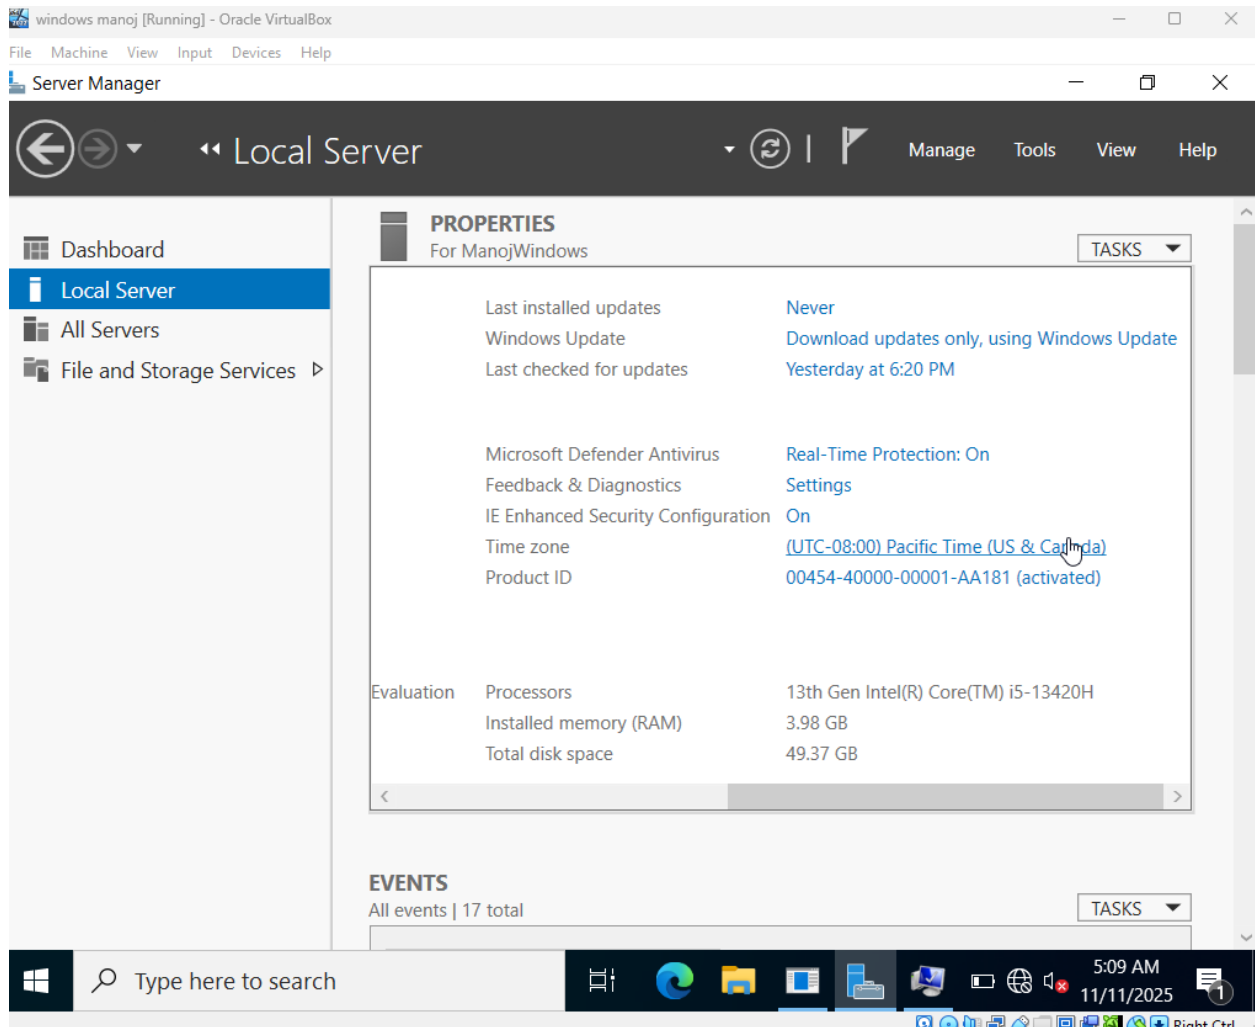

Figure 13: Server Manager - Time Zone

The New window will open and click in change time zone button.

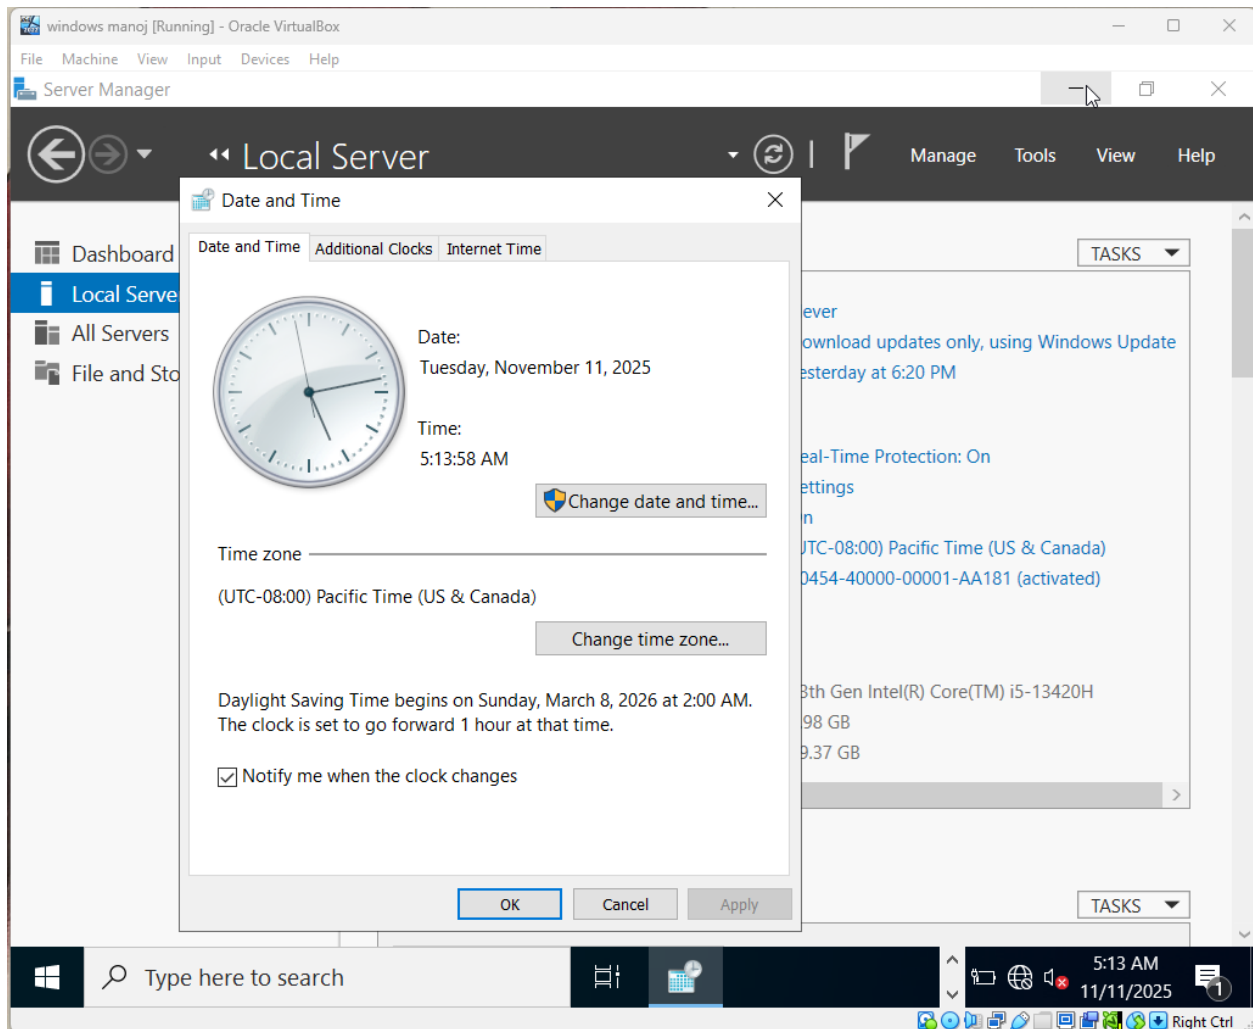

Figure 14:Date and Time Zone window

From the dropdown time zone select the correct zone.

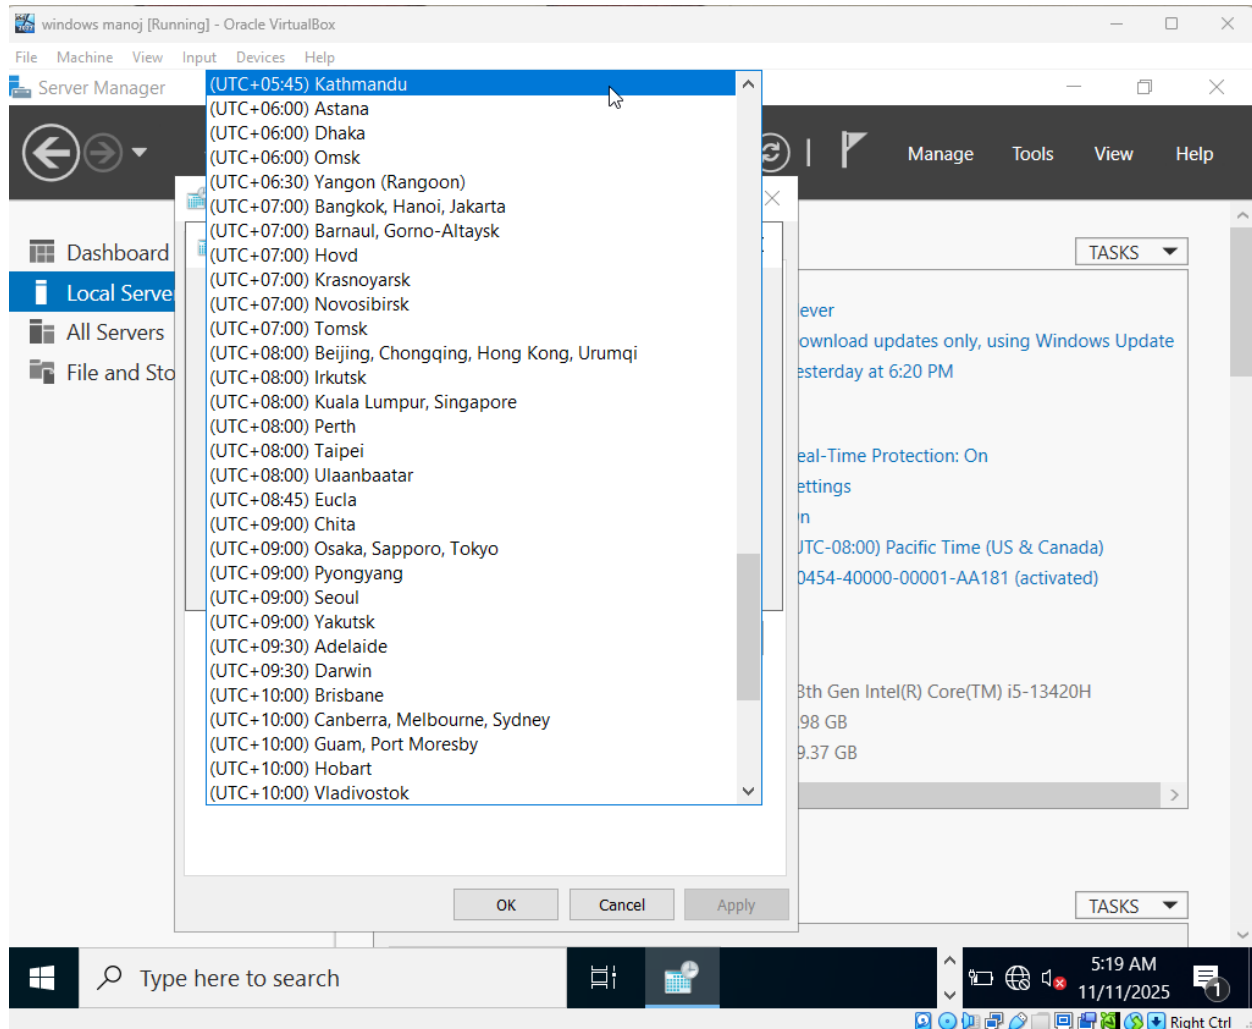

Figure 15: List of time zone

Finally press the “OK” Button.

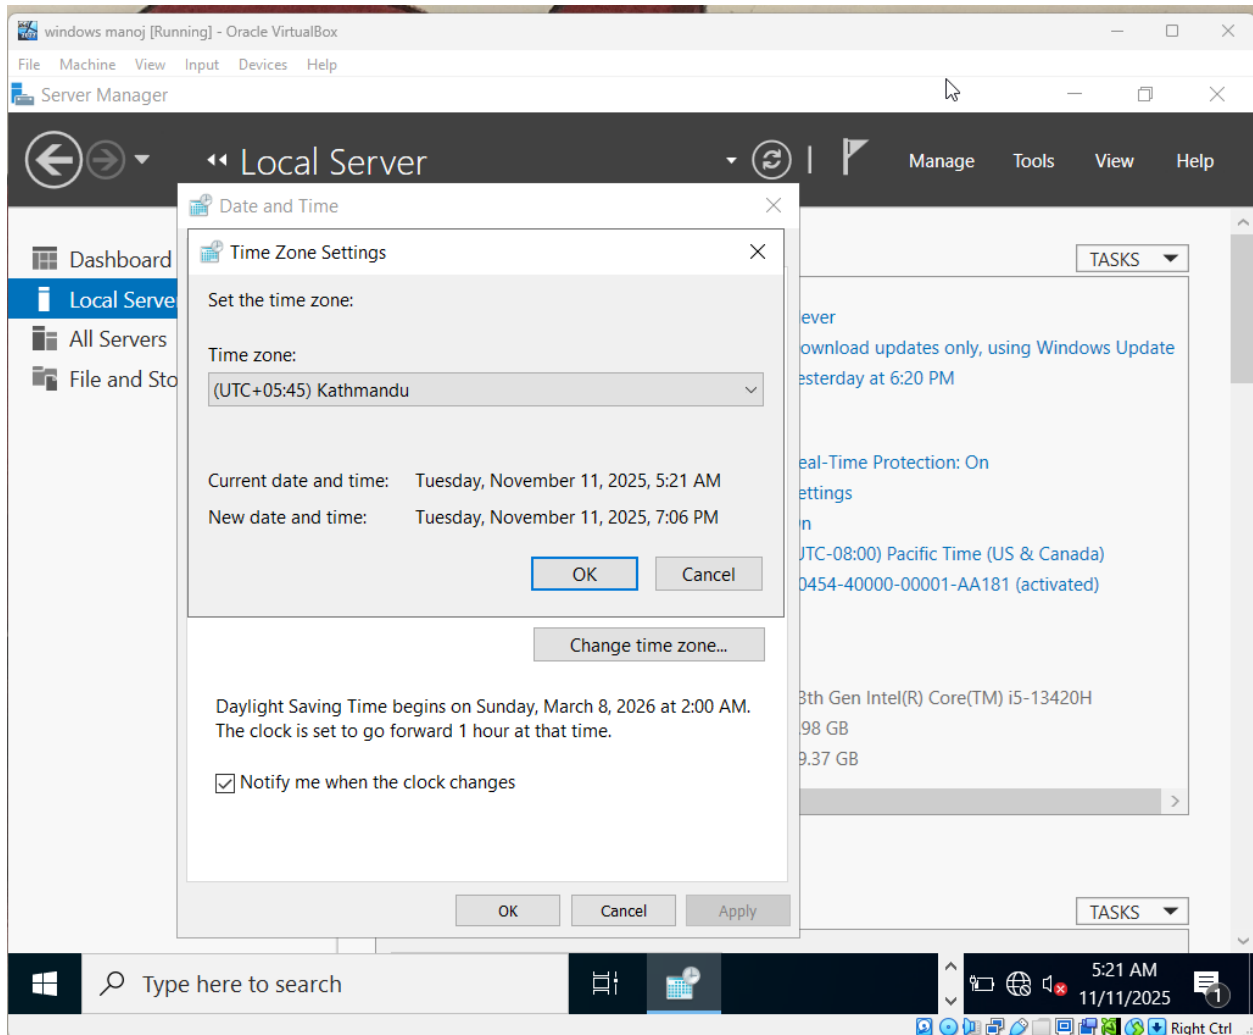

Figure 16: Time Zone Setup Confirmation

1.4.5 Turning off IE enhanced security and checking for updates

To turn off IE enhanced security in server manager, IE Enhanced Security button is pressed which will open a new window.

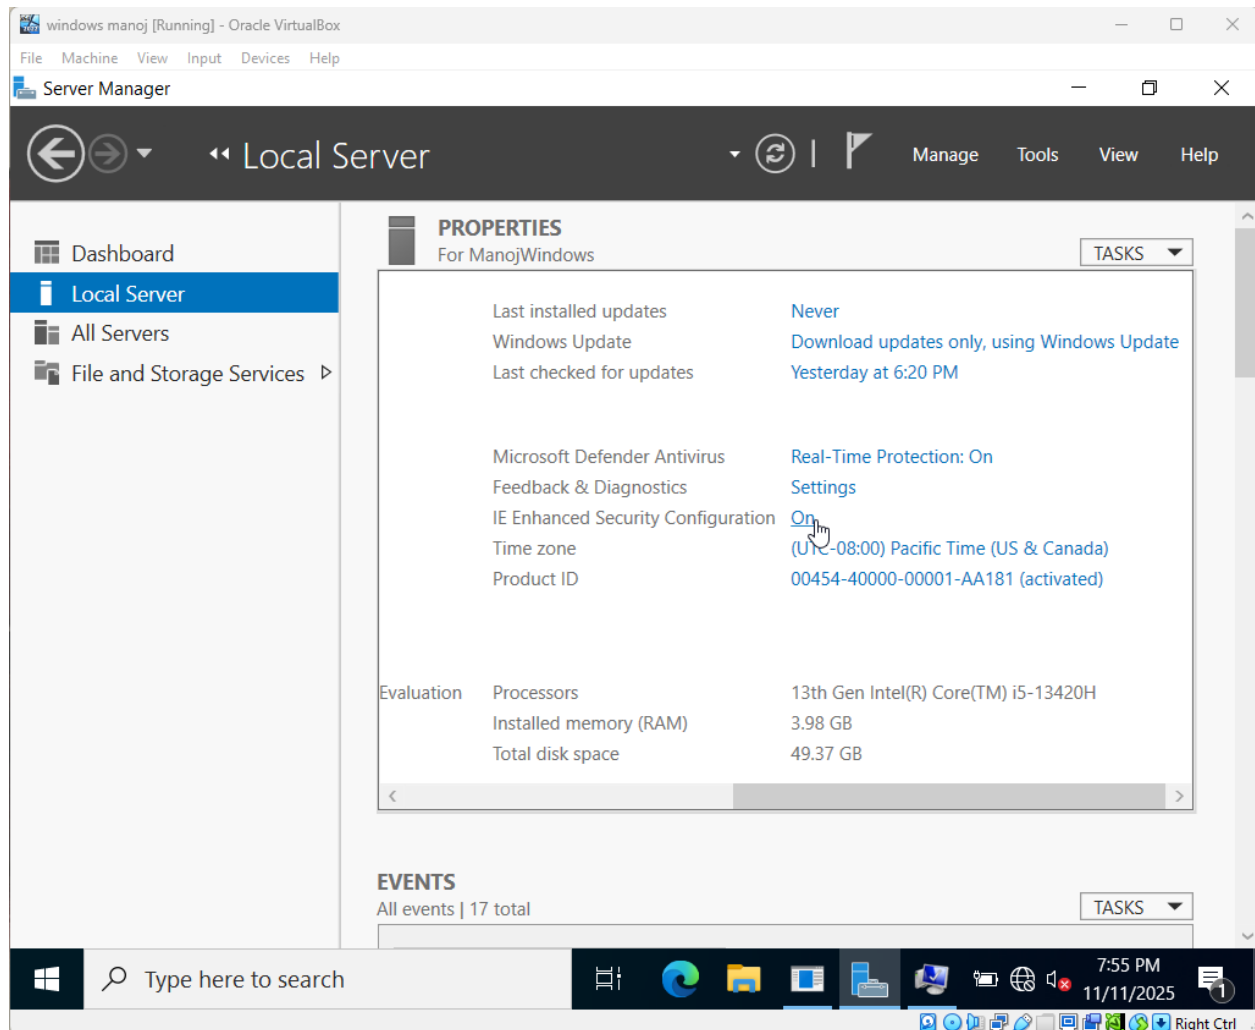

Figure 17:IE Enhanced Security Configuration

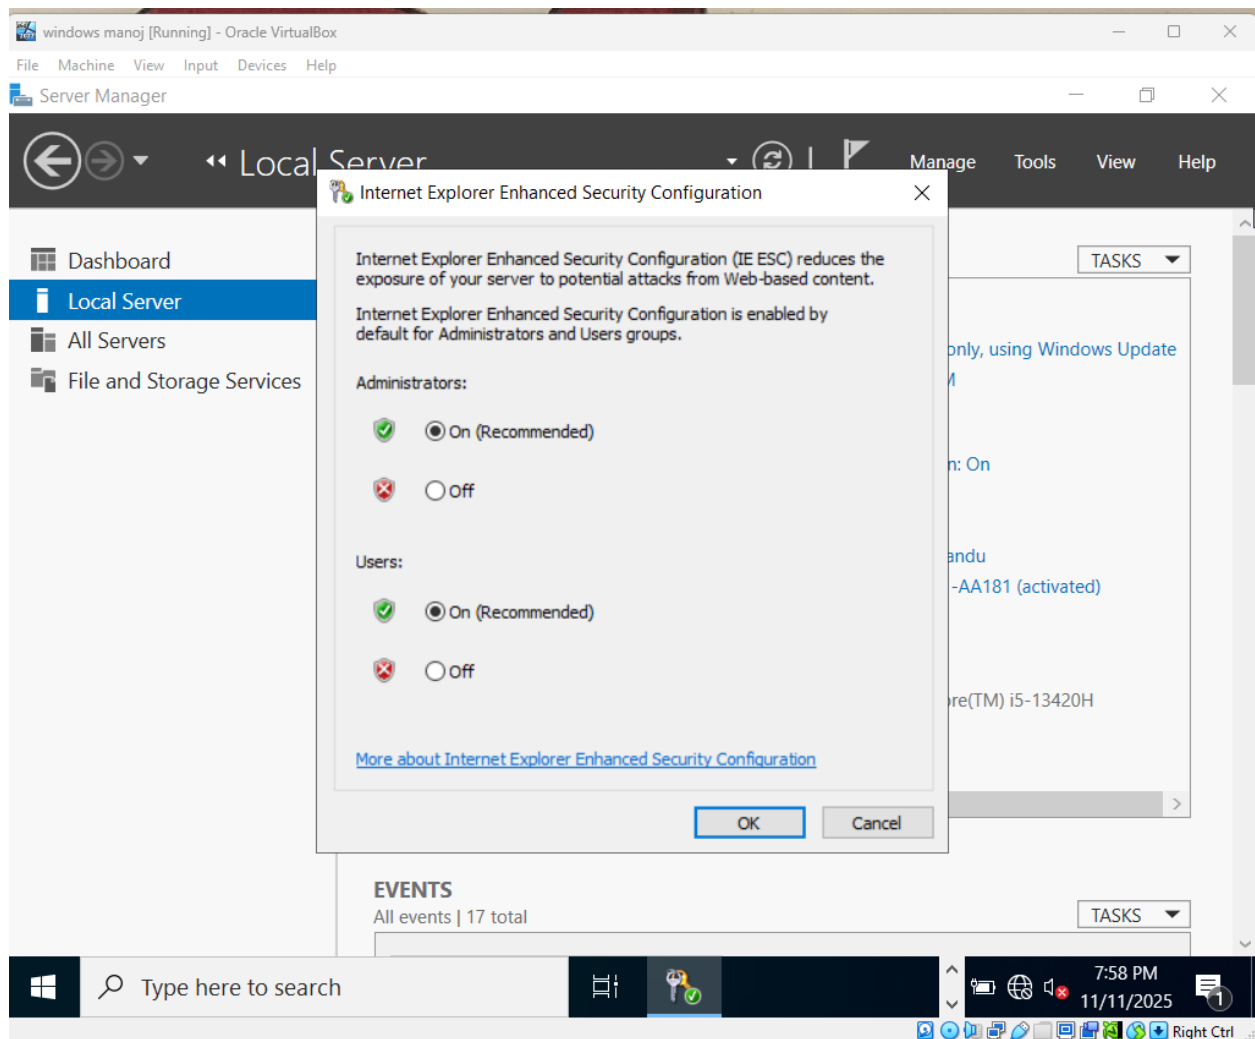

Figure 18: Internet Explorer Enhanced Security Configuration

By Default, the Security Configuration is turned on make it both off.

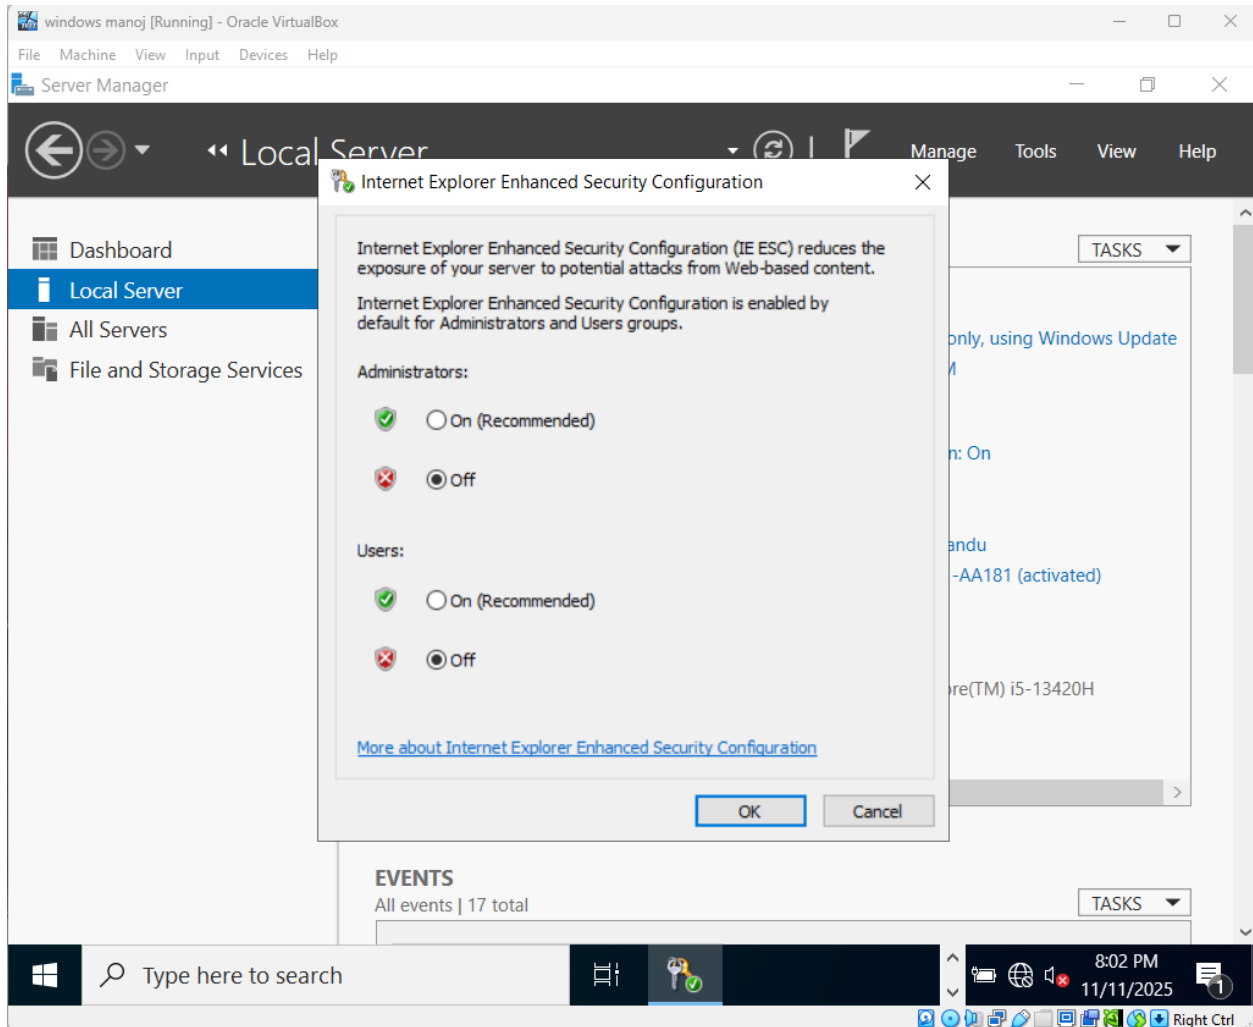

Figure 19: Turning off in both administrator and Users

Search Windows update on the search tab and Check for updates if the new update is available then the updates will automatically be installed.

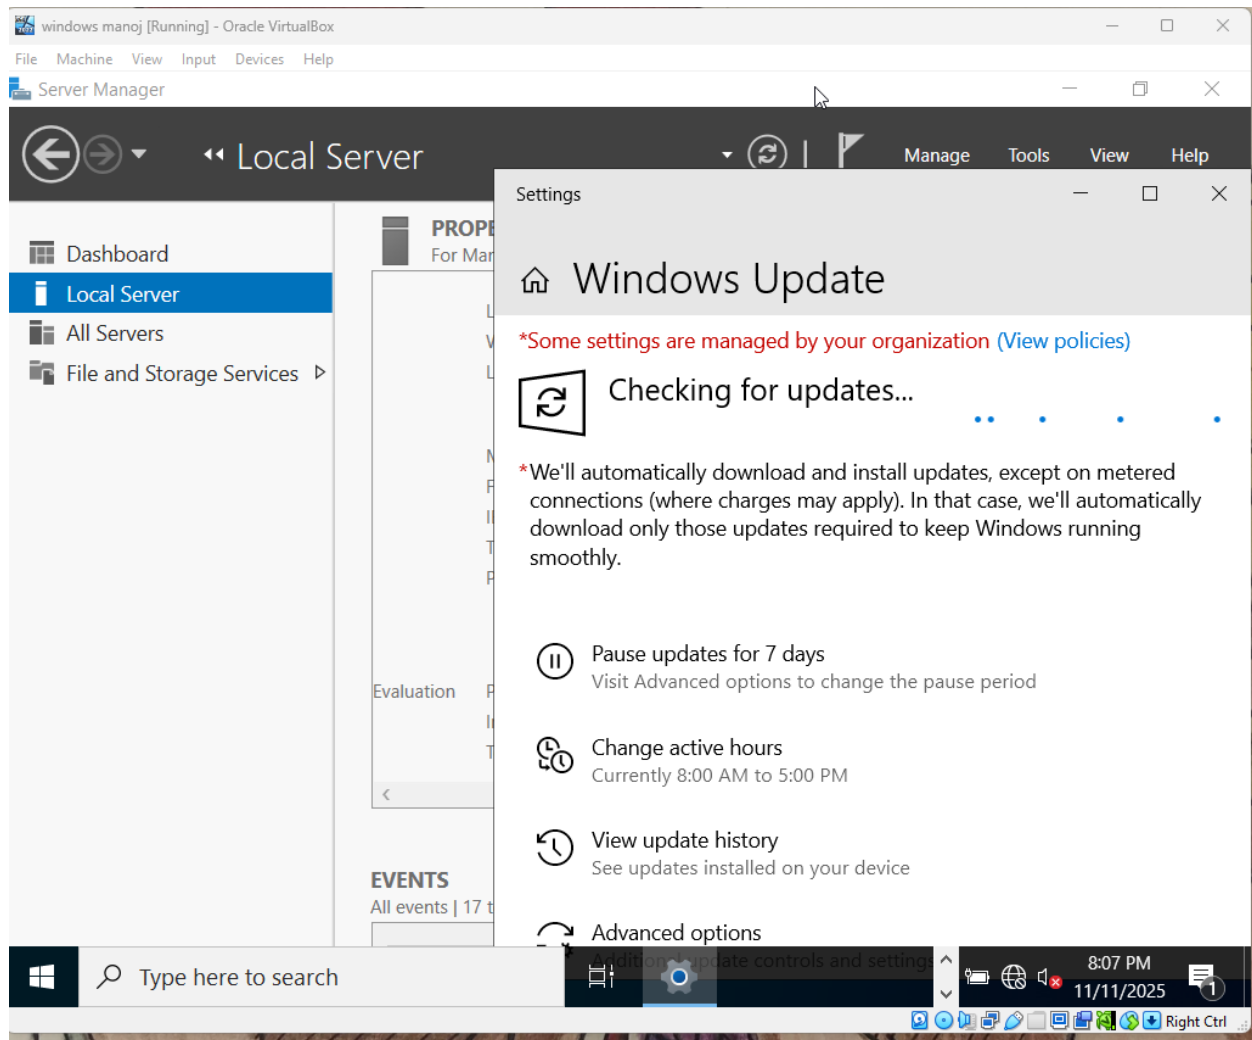

Figure 20: Windows Checking for updates

1.4.6 Adding user using GUI

From the server manager , top right corner select tools and from the list select Computer Management.

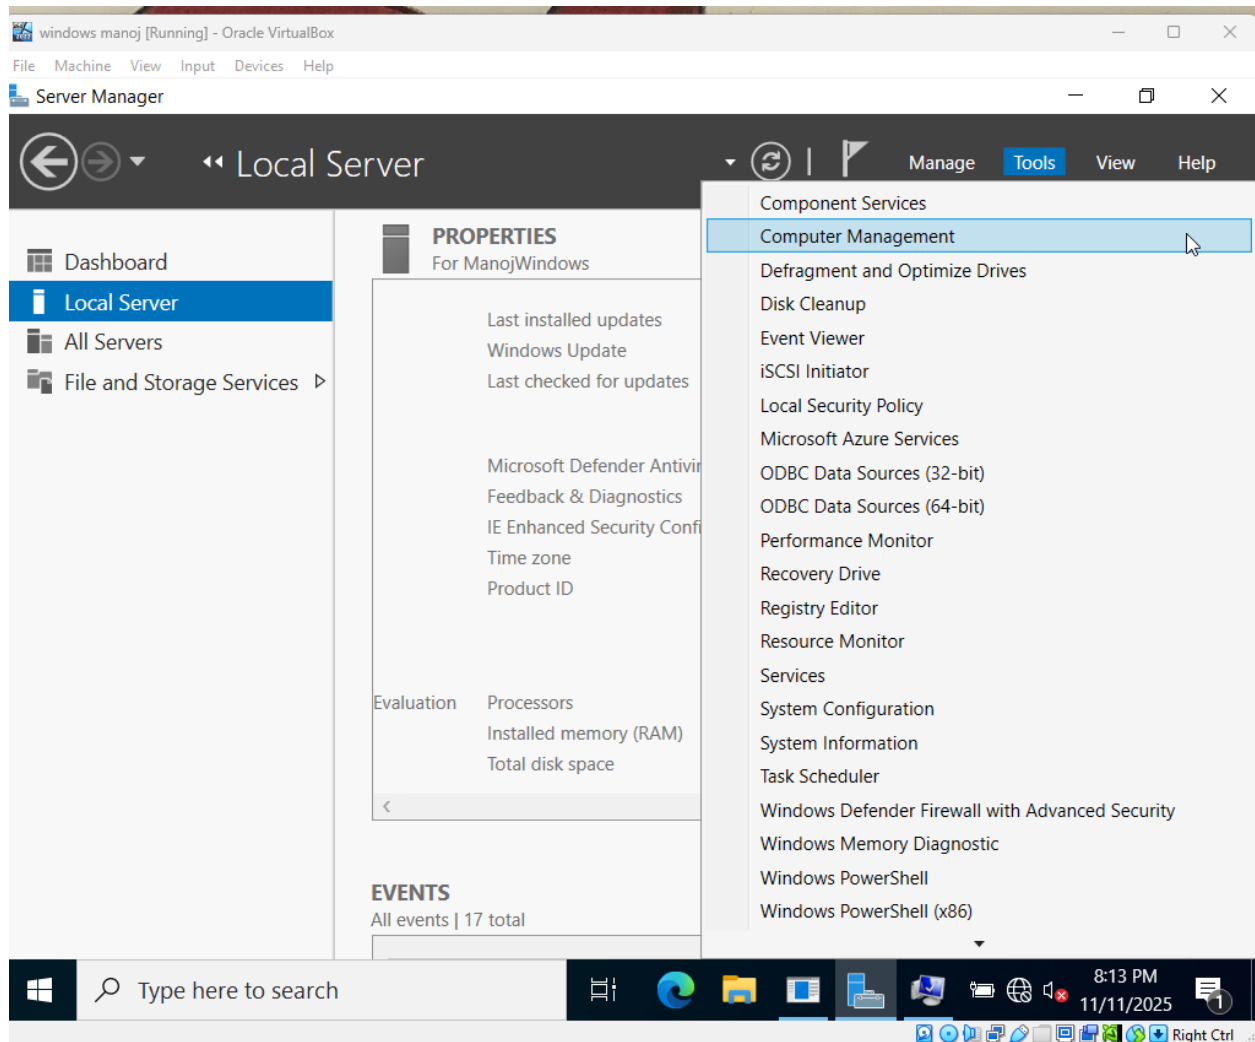

Figure 21:Server Manager- Computer Management

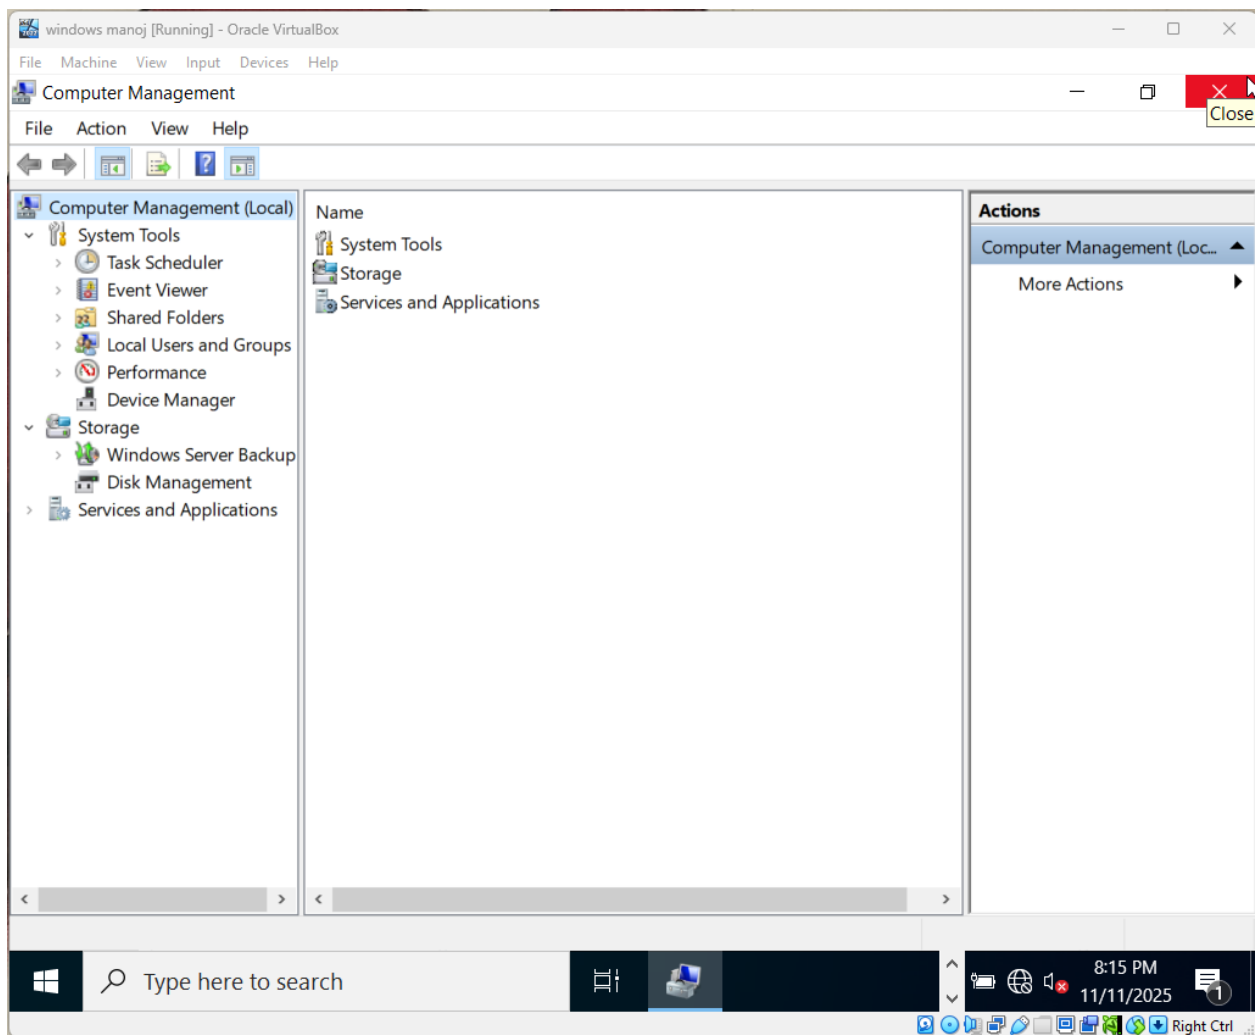

Figure 22:Computer Management

Select Local Users and Groups section at located at left corner and right click on the user and create a new user.

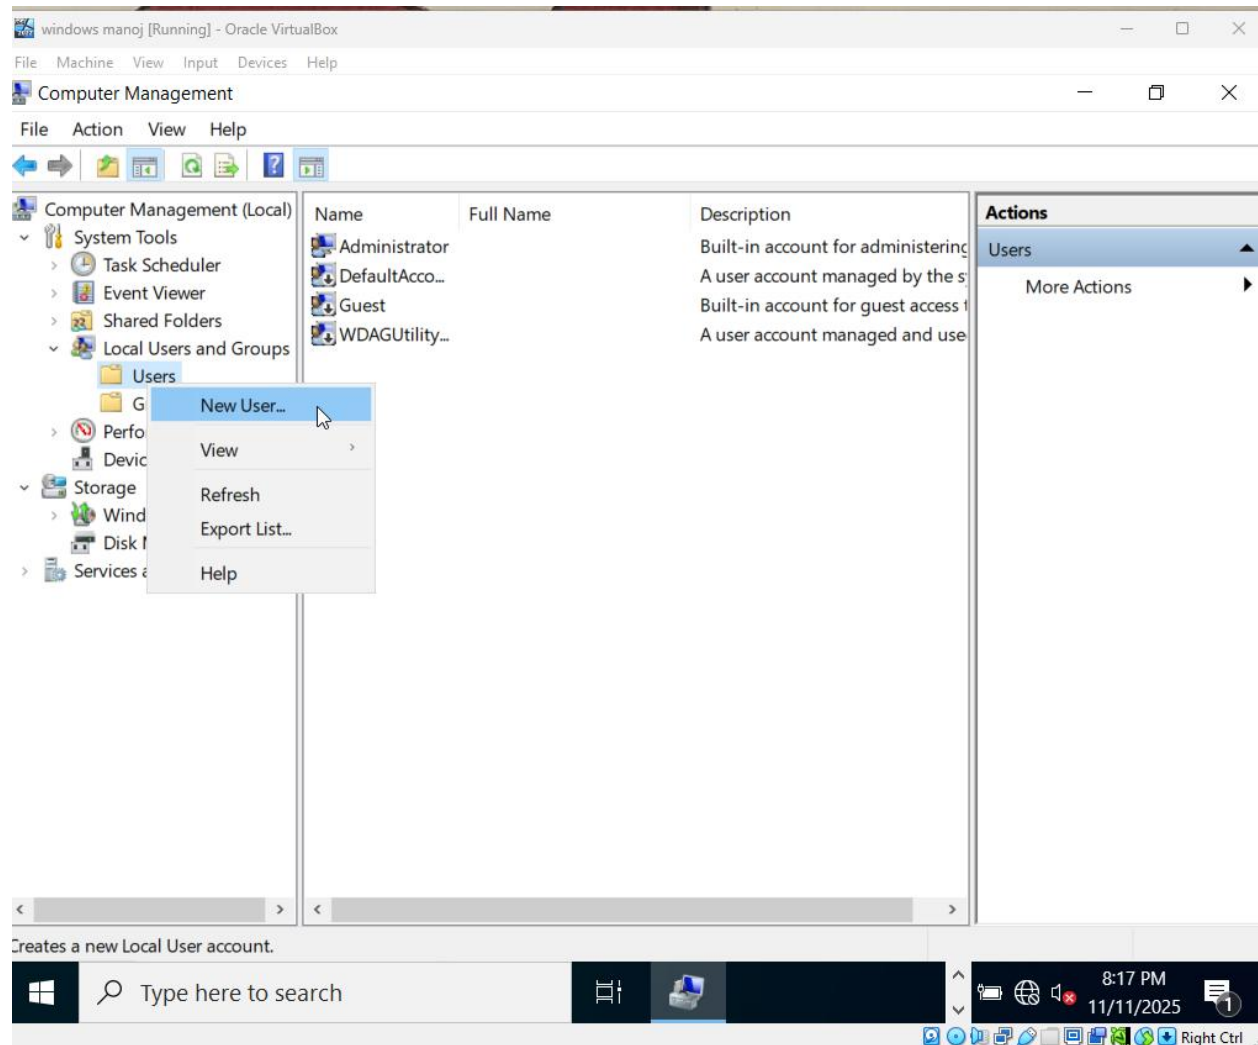

Figure 23:Local Users and Groups - new user

After clicking the new user, then form will be opened.

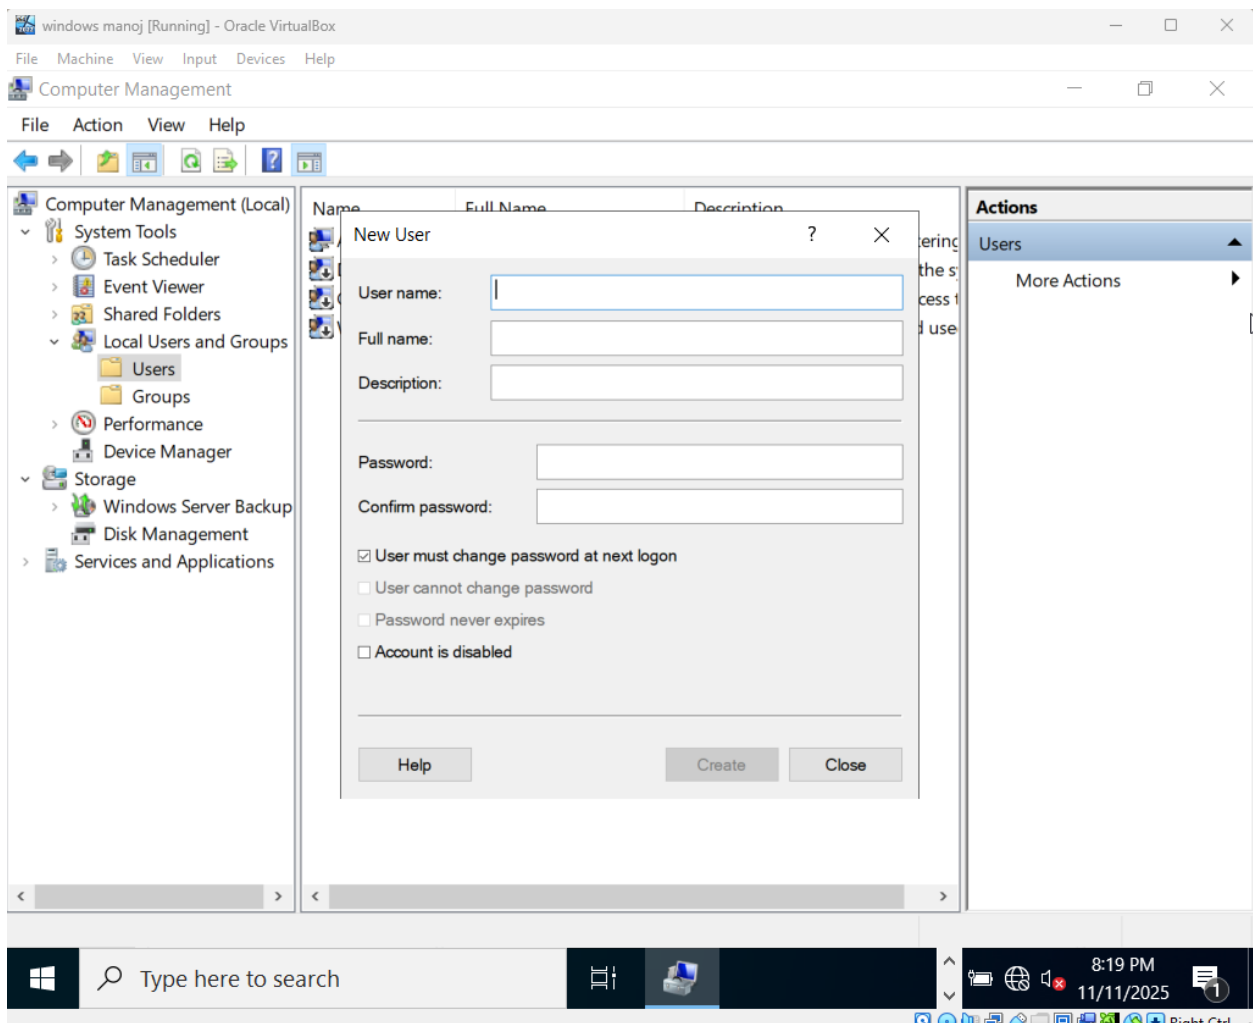

Figure 24:New user form

On the form enter the new user details.

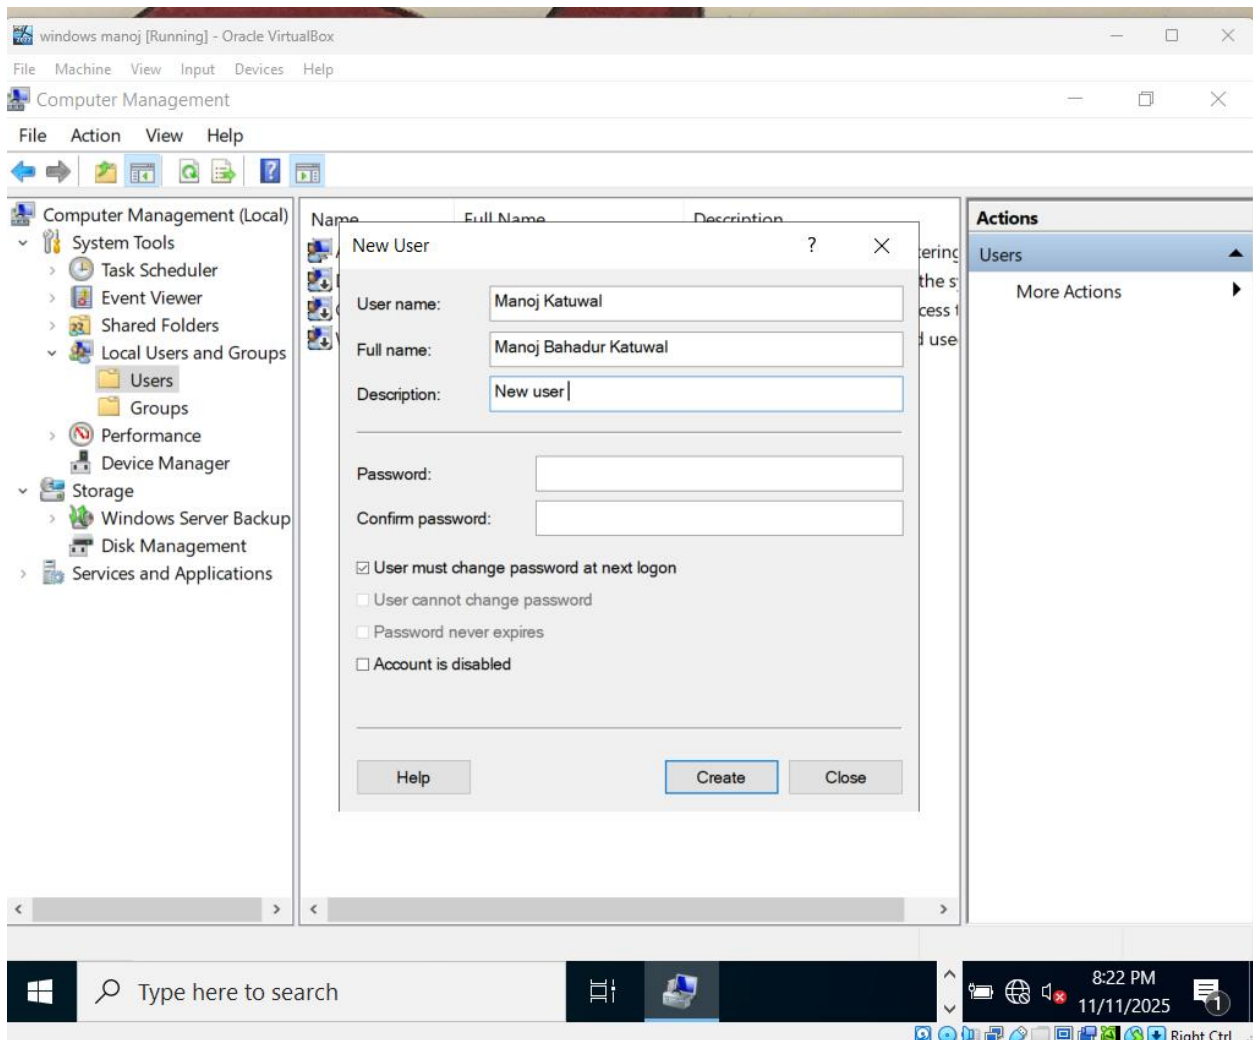

Figure 25: Filling the new user form

Then the new user will be added.

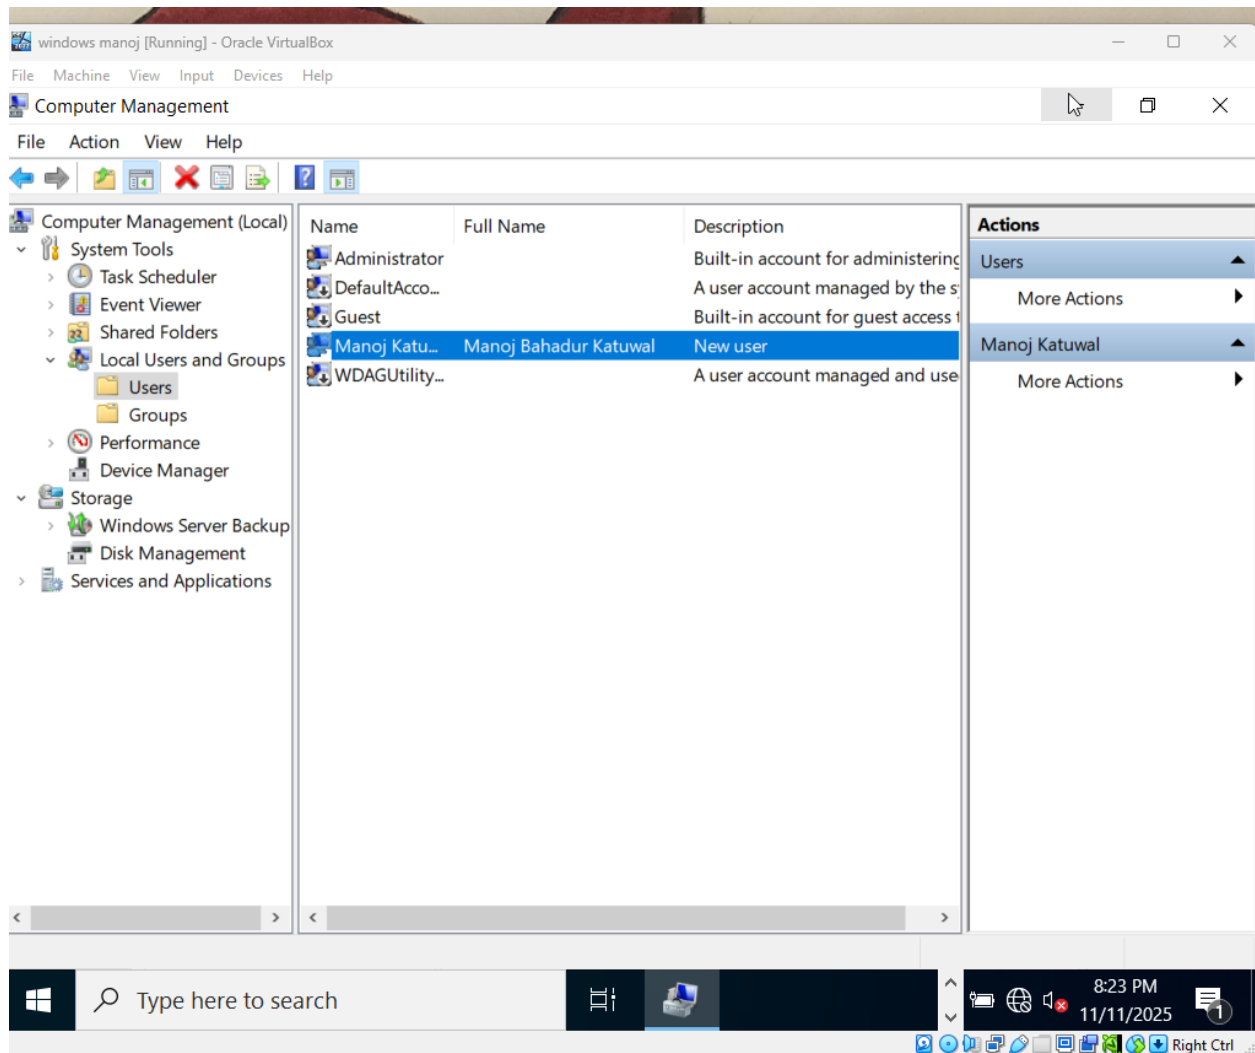

Figure 26: New User Display Window

1.4.7 Adding new user using shell

Open Windows PowerShell as an administrator.

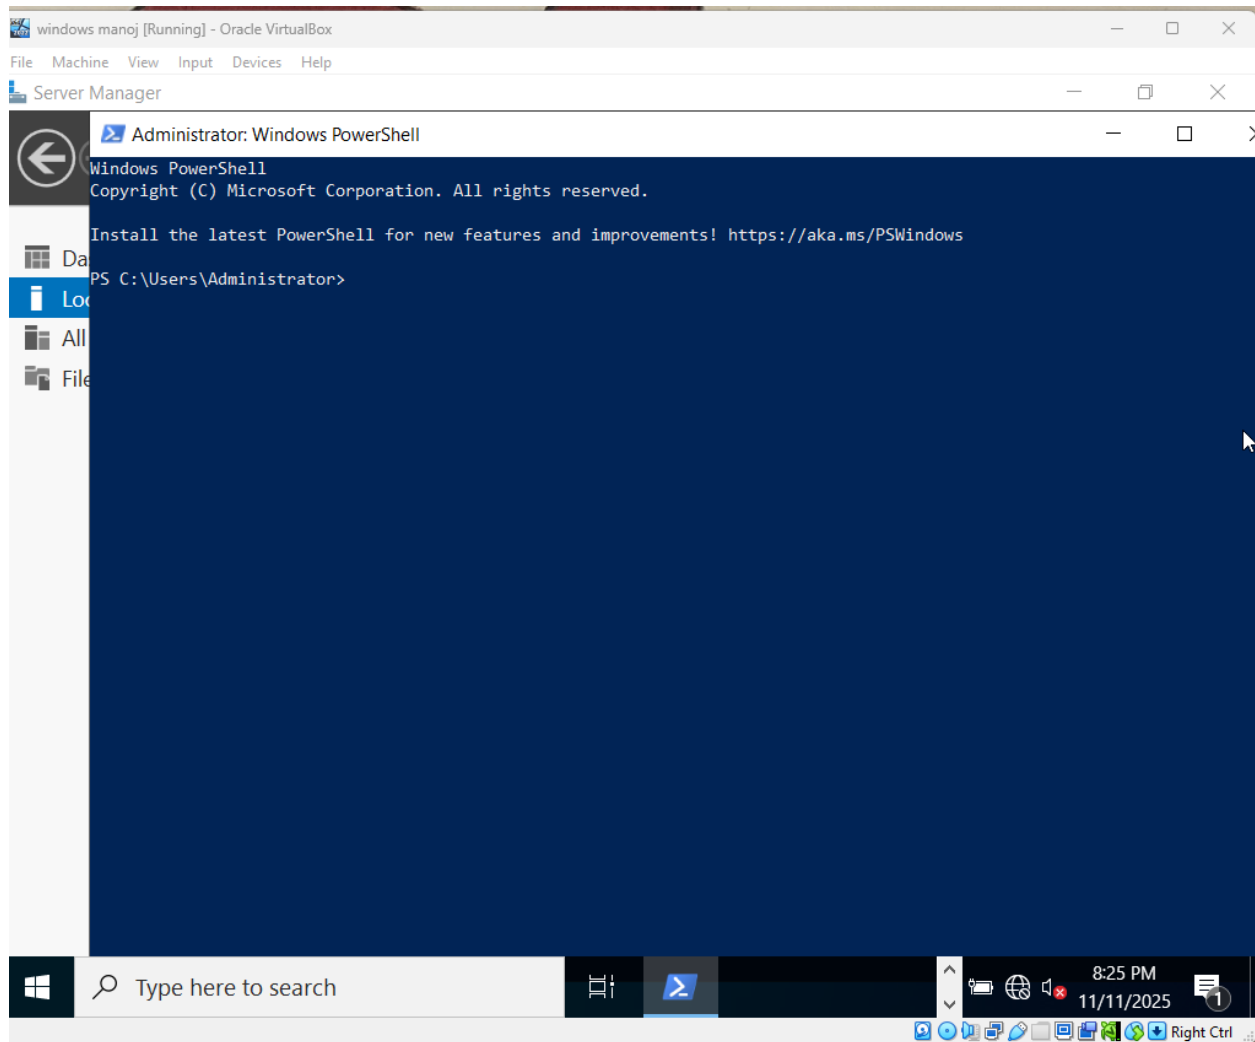

Figure 27: Windows PowerShell

Enter the get-localuser command in Power shell

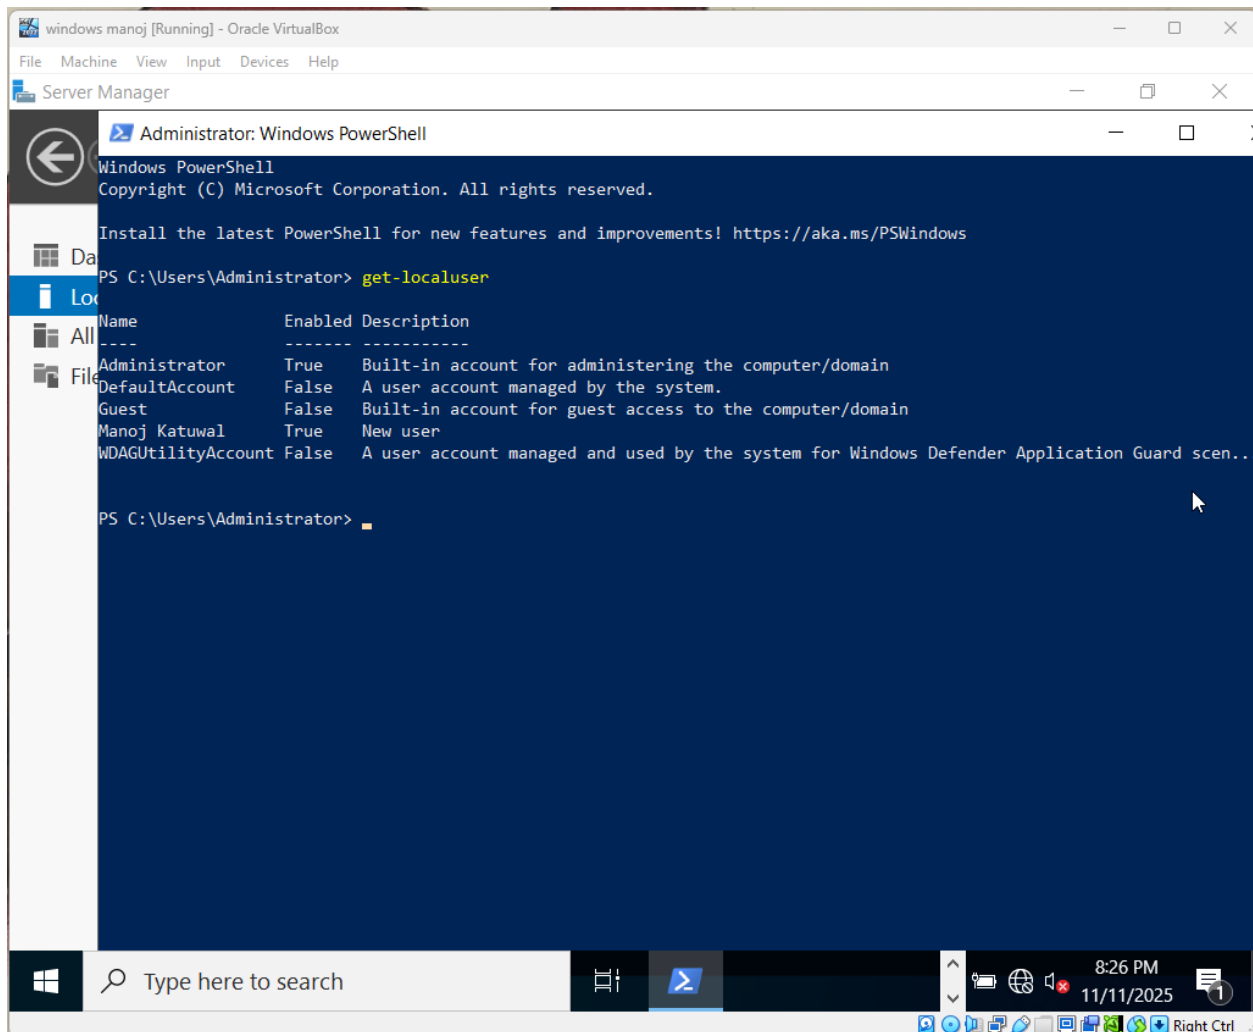

Figure 28: PowerShell command "get -localuser"

Enter the command "new-localuser -name 'username' -description 'description' -password 'password' " to create new user. In this case, nopassword is given to skip the password.

```
PS C:\Users\Administrator> new-localuser -name "name user 2" -description "This is a test user 2" -nopassword

Name           Enabled Description
-----
name user 2    True     This is a test user 2

PS C:\Users\Administrator> get-localuser

Name           Enabled Description
-----
Administrator   True     Built-in account for administering the computer/domain
DefaultAccount  False    A user account managed by the system.
Guest            False    Built-in account for guest access to the computer/domain
name user 2      True     This is a test user 2

```

```

PS C:\Users\Administrator> add-localgroupmember -group "Users" -member "name user 2"
PS C:\Users\Administrator> remove-localuser -name "name user 2"
PS C:\Users\Administrator> get-localuser

Name           Enabled Description
-----
Administrator   True   Built-in account for administering the computer/domain
DefaultAccount  False  A user account managed by the system.
Guest           False  Built-in account for guest access to the computer/domain
RS              True   my nickname
WDAGUtilityAccount False  A user account managed and used by the system for Windows Defender Application Guard scen...

PS C:\Users\Administrator> $password = read-host -assecurestring
*****
PS C:\Users\Administrator> new-localuser -name "name user 3" -password $password -description "This is new user 3"

Name           Enabled Description
-----
name user 3    True   This is new user 3

PS C:\Users\Administrator> $password = read-host -assecurestring
*****

```

1.4.8 Removing a user

```

PS C:\Users\Administrator> add-localgroupmember -group "Users" -member "name user 2"
PS C:\Users\Administrator> remove-localuser -name "name user 2"
PS C:\Users\Administrator> get-localuser

Name           Enabled Description
-----
Administrator   True   Built-in account for administering the computer/domain
DefaultAccount  False  A user account managed by the system.
Guest           False  Built-in account for guest access to the computer/domain
RS              True   my nickname
WDAGUtilityAccount False  A user account managed and used by the system for Windows Defender Application Guard scen...

PS C:\Users\Administrator> $password = read-host -assecurestring
*****
PS C:\Users\Administrator> new-localuser -name "name user 3" -password $password -description "This is new user 3"

Name           Enabled Description
-----
name user 3    True   This is new user 3

PS C:\Users\Administrator> $password = read-host -assecurestring
*****

```

1.4.9 Storing passwords using variables as secure strings

```

PS C:\Users\Administrator> $password = read-host -assecurestring
*****

```

```
PS C:\Users\Administrator> new-localuser -name "new user 3" -password $password -description "This is a new user 3"
Name           Enabled Description
-----
new user 3     True    This is a new user 3

PS C:\Users\Administrator> get-localuser

Name           Enabled Description
-----
Administrator   True    Built-in account for administering the computer/domain
DefaultAccount  False   A user account managed by the system.
Guest            False   Built-in account for guest access to the computer/domain
name user 3     True    This is new user 3
new user 3      True    This is a new user 3
RS              True    my nickname
WDAGUtilityAccount False   A user account managed and used by the system for Windows Defender Application Guard scen..
```

1.4.10 Conclusion

This lab successfully demonstrated fundamental Windows Server 2022 post-installation tasks using Server Manager and PowerShell.
